EST8 CallDesk — Product Spec for Lovable

Nov 3, 2026 · @Andrew Chavis

Overview

EST8 CallDesk is a phone-sales workspace and CRM for life insurance agents, built and sold by EST8 Financial Group. An agent clicks a lead and reads a live script with that lead's own details filled in, verifies each detail as the client confirms it, and moves the lead from new lead to policy in force without leaving the screen.

Who it's for: independent agents selling mortgage protection and final expense by phone, starting with Andrew Chavis (EST8 Financial, licensed in TX, MI, OH, SC, VA) and later other agents on the EST8 team.

What it replaces: paper scripts, a separate CRM, a spreadsheet of leads, and retyping the lead into a quoting tool.

What exists today: a working single-file prototype (a Claude artifact) that runs in the browser and saves to that browser only. This spec describes everything in it so Lovable can rebuild it as a real app with logins, a shared database and outside connections (Quoteplicity, CallHippo, lead vendors).

Core features

- **Dialer view:** lead queue, live script, lead card side by side.
- **Three scripts:** mortgage protection Step 1 (B.E.S.T., set the appointment), Step 2 (R.E.A.L., the presentation), and a one-call final expense script. SFG mortgage protection material is merged into both mortgage steps.
- **Dynamic fill:** the lead's name, address, loan, age, beneficiary and other fields appear inside the spoken lines; math (equity, cash flow, pricing anchors) runs live.
- **Verification:** every lead-supplied detail is a chip the agent marks verified or corrects, keeping the original.
- **CRM:** six pipeline stages plus parked stages, call outcomes, timestamped notes, follow-ups, a pipeline board and weekly goals.
- **Agent profile:** photo, contact details, NPN, state licenses, carrier writing numbers, AML and E&O, with expiration alerts.
- **Compliance guards:** licensed-state check, client local time against 8 a.m.–9 p.m., DNC reminder, fresh vs aged opener cadence.

- **Quoting:** a Quoteplicity link pre-filled from the lead.
- **Import and export:** CSV, Excel or pasted rows from any vendor, with column matching; CSV export.

How to use this spec in Lovable: build in the order of the Build phases section at the end. Each section stands on its own, so it can be pasted into Lovable one at a time. Screenshots show the prototype's current layout; the Brand section sets the look the app should have.

Brand

The app is **EST8 CallDesk by EST8 Financial Group**, shown with the line "in partnership with Symmetry Financial Group" on the login screen and in the footer. It uses the same colors as the EST8 quoter already live in Quoteplicity, so the quote form and the desk look like one product.

Token	Hex	Use
Navy (primary)	#19388B	Headings, active nav, primary buttons, section letters
Ember orange (action)	#FF701F	The one call-to-action per screen: Open quote, Log dial, Application submitted
Sky blue (selected)	#5CA5FC	Selected chips, verified fields, focus rings
Slate (quiet)	#9BADBE	Labels, cues, timestamps, borders
Paper	#F6F8FB	App background (light)
Ink	#14202B	Body text (light)
Night	#0D1217	App background (dark)

- **Status colors** stay separate from the brand: green for verified, sold and in force; amber for missing data, call back and expiring credentials; red for not licensed, outside calling hours, not interested and do not call.
- **Final expense** leads carry a small purple FE tag and mortgage leads a navy MP tag, so the two lines are told apart in every list.

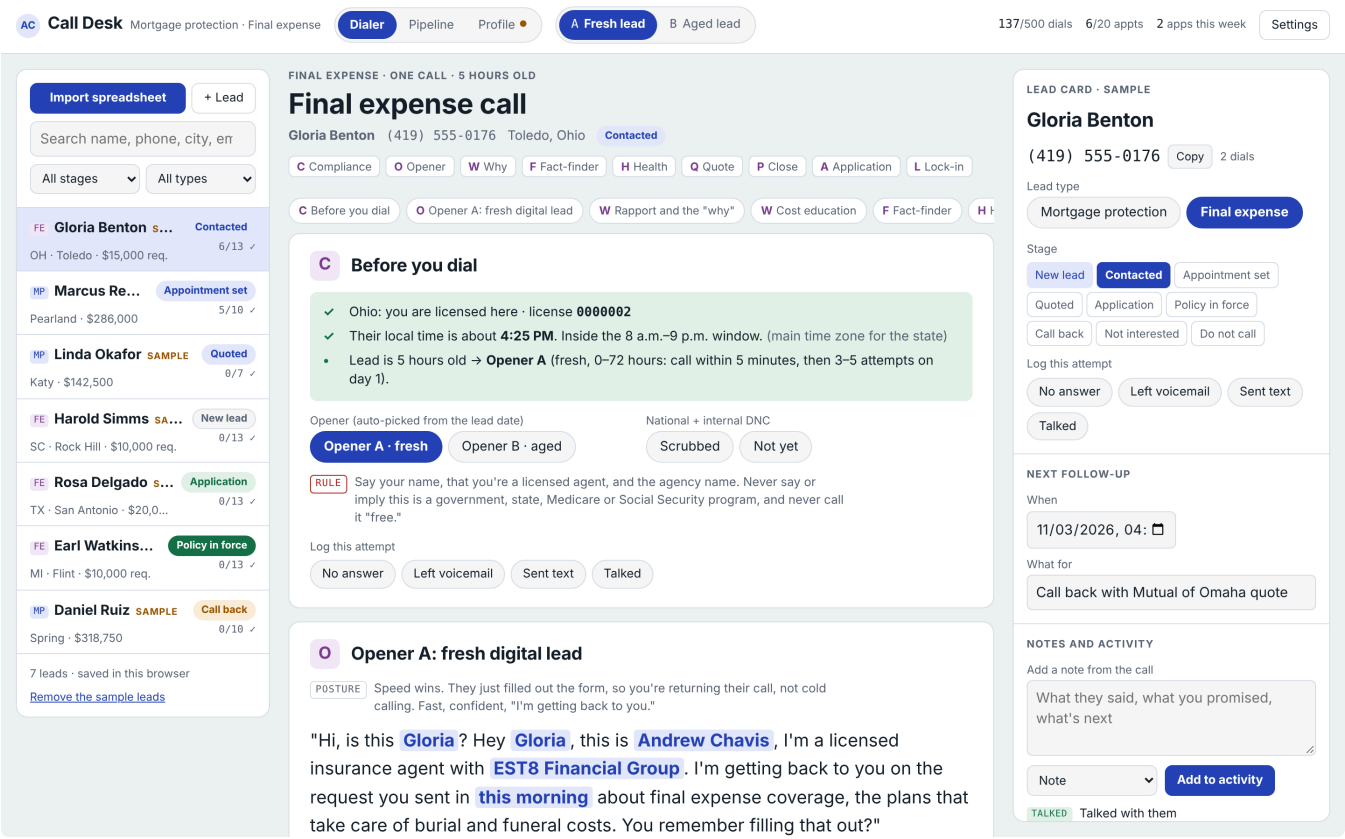

- **Type:** Bricolage Grotesque (600, 700) for headings and section letters; Atkinson Hyperlegible for scripts and UI, picked because agents read it aloud on live calls; IBM Plex Mono for phone numbers, license and writing numbers, and money.
- **Script lines** are set large (19 px desktop, 17 px phone) and stay under about 66 characters wide. Coaching cues are small and quiet, so the eye lands on what to say.
- **Filled-in lead details** show in navy on a pale blue tint. Missing details show as amber italic placeholders like [beneficiary], so a gap is obvious mid-sentence.
- **Logo and photo:** EST8 logo top left beside the agent's round profile photo, or initials when there's no photo. Andrew uploads the logo file to Lovable.
- **Voice in the app's own words:** short, plain and specific ("Application logged", "Outside 8 a.m.–9 p.m. Wait to call"). Never imply coverage is a government, Medicare or Social Security program, and never call it free.
- **Light and dark themes** both supported, following the device setting.

Screens and navigation

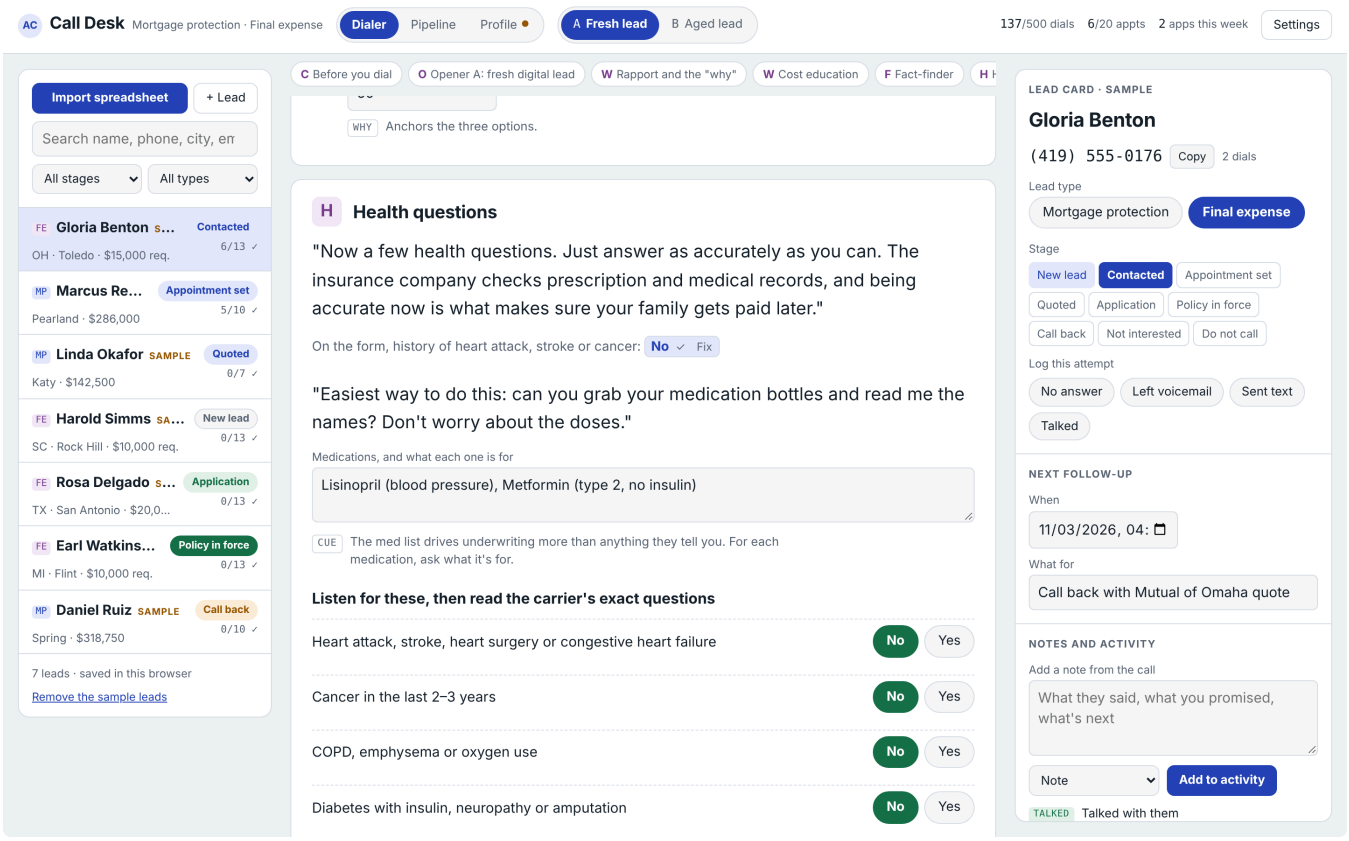

The app has three views in a top bar: **Dialer**, **Pipeline** and **Profile**. The bar also holds the script step switch, this week's dial, appointment and application counts, and Settings. All screenshots use made-up sample leads and placeholder license numbers.

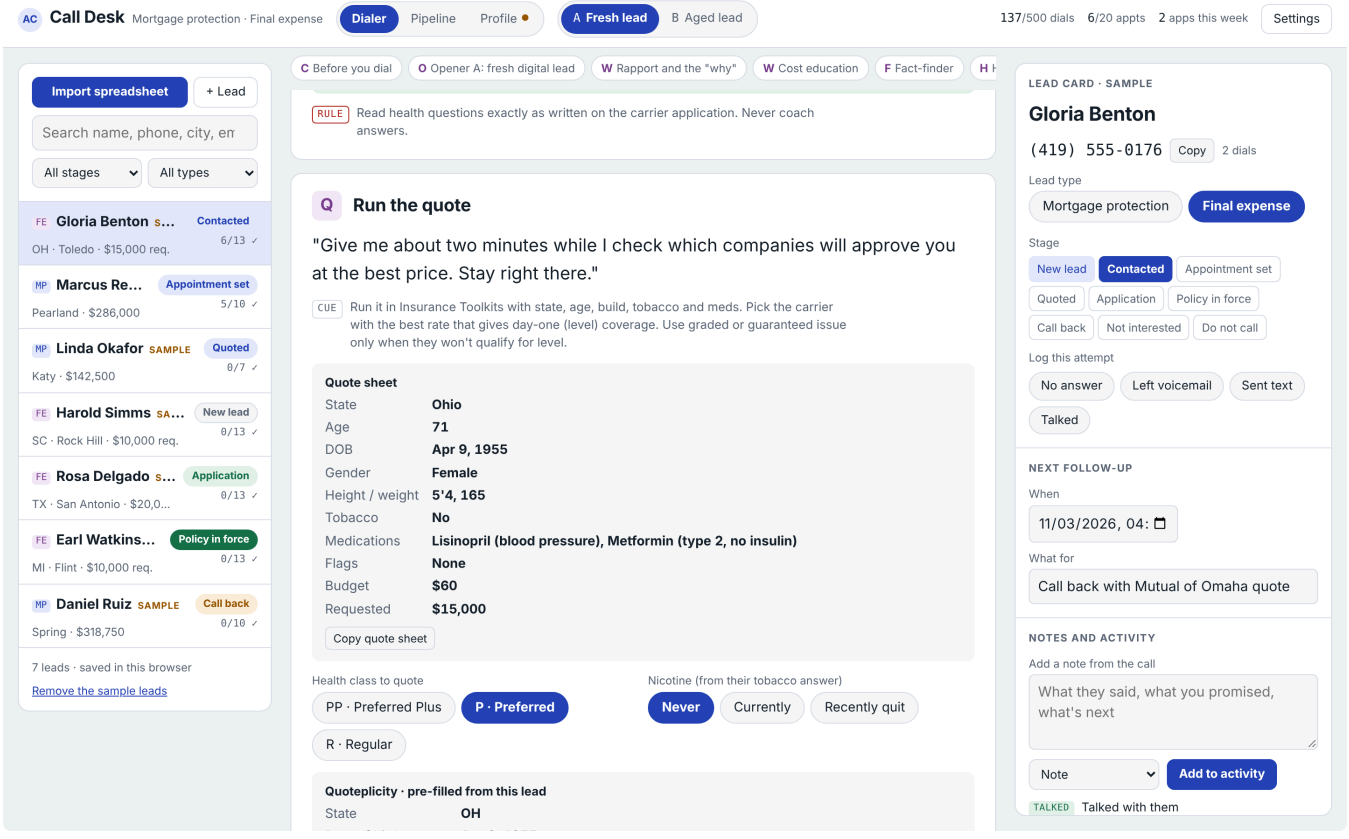

1. Dialer

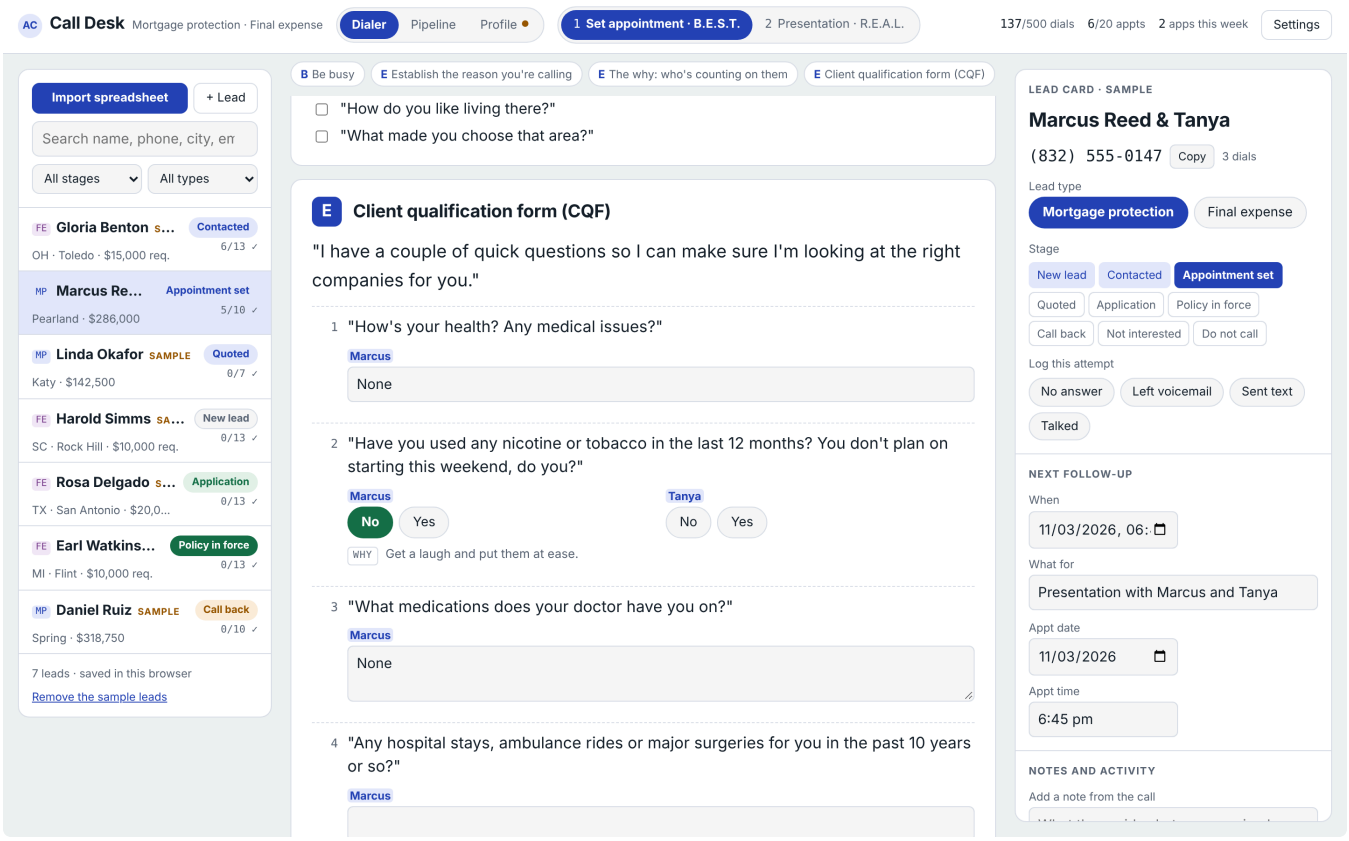

Three columns: lead queue (272 px), live script (fills the middle, max 780 px), lead card (340 px). The left and right columns stick and scroll on their own; the script scrolls with the page under a sticky row of section chips.

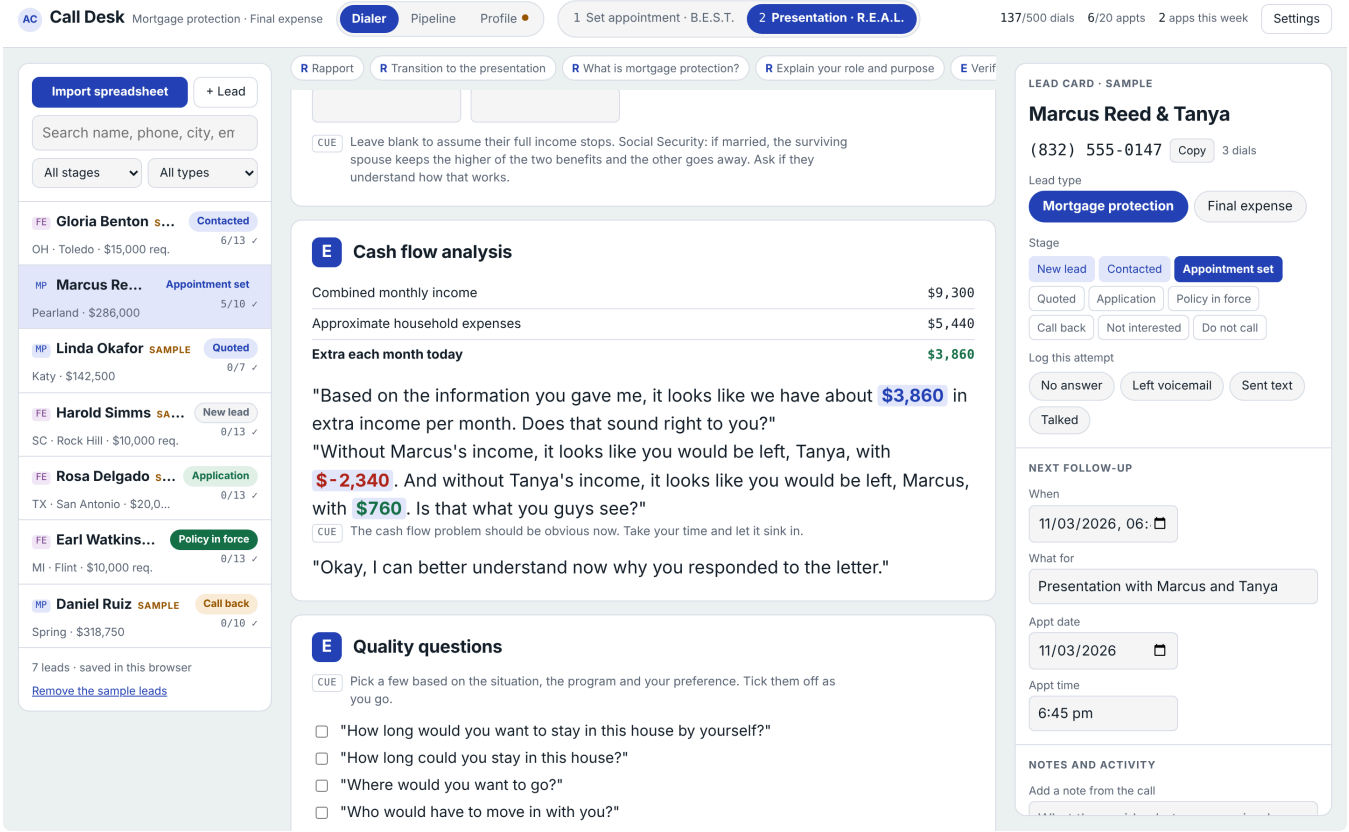

- **Lead queue:** Import spreadsheet and + Lead buttons, search (name, phone, city, email), stage and type filters. Each row shows the MP or FE tag, name, a Sample tag where it applies, stage pill, a city and amount line, and a verified count such as 6/13.
- **Script header:** eyebrow ("Final expense · one call · 5 hours old" or "Step 1 of 2 · Phone call"), title, name, phone, location, stage pill, the method's letters (C O W F H Q P A L, or B E S T, or R E A L), then section chips that jump to each section.
- **Lead card:** name, phone with Copy, dial count, lead type switch, stage stepper, dial outcome buttons, next follow-up, notes and activity, verification list, snapshot, Policy, objection handlers and voicemail/text templates (final expense) or power phrases (mortgage Step 1), all lead fields, and Delete with a second-tap confirm.

R Rapport
R Transition to the presentation
R What is mortgage protection?
R Explain your role and purpose
E Verif
CUE Leave blank to assume their full income stops. Social Security: if married, the surviving spouse keeps the higher of the two benefits and the other goes away. Ask if they understand how that works.
E Cash flow analysis
Combined monthly income $9,300
Approximate household expenses $5,440
Extra each month today $3,860
"Based on the information you gave me, it looks like we have about $3,860 in extra income per month. Does that sound right to you?"
"Without Marcus's income, it looks like you would be left, Tanya, with $-2,340. And without Tanya's income, it looks like you would be left, Marcus, with $760. Is that what you guys see?"
CUE The cash flow problem should be obvious now. Take your time and let it sink in.
"Okay, I can better understand now why you responded to the letter."
E Quality questions
CUE Pick a few based on the situation, the program and your preference. Tick them off as you go.
"How long would you want to stay in this house by yourself?"
"How long could you stay in this house?"
"Where would you want to go?"
"Who would have to move in with you?"

2. Pipeline

Summary tiles (leads, appointments set, applications pending with monthly premium, policies in force with monthly premium), follow-ups due today with overdue marked, then one column per stage plus Parked. Each card opens the lead in the Dialer and has a button that moves it to the next stage.

3. Profile

One page of cards: alerts, profile and photo, on your calls, quoting links, licensing, carrier writing numbers, additional info. Details are in the Agent profile section below.

AC **Call Desk** Mortgage protection · Final expense | Dialer | Pipeline | Profile | 137/500 dials | 6/20 appts | 2 apps this week | Settings

E&O coverage expires in 40 days (Dec 13, 2026).

PROFILE

Your photo, name, role and contact details. Your name and agency are what the scripts read on calls.

AC **Add photo**

JPG or PNG. Adjust position sets where your face sits in the circle.

Display name: Andrew Chavis

Role: Agent

Phone number Licensing support only, never public: (000) 000-0000

Email: agent@est8financial.com

Booking / calendar link: https://calendly.com/your-handle

IMO / agency: Symmetry Financial Group (SFG)

ON YOUR CALLS

What the scripts say when you introduce yourself and give out your number.

Agency name you say on calls: EST8 Financial Group

Callback number you give clients: (000) 000-0000

QUOTING

In Quoteplicity's Link Builder, pick an engine and copy the Link at the top. The desk adds the lead's state, DOB, gender, height, weight, nicotine, health class, coverage and term for you.

Mortgage protection link (No Medical Exam or Term engine): https://example.quoteplicity.com/quote/no-exam

Final expense link (Final Expense engine): https://example.quoteplicity.com/quote/final-expense

Send the lead's name, email and phone: No, quote only

Links must start with https://. Sending contact details can create a lead in your Quoteplicity CRM and trigger its automations, so it's off by default.

LICENSING

+ Add state

The final expense compliance check uses these states, and the scripts show your license number when a lead is in one of them.

NPN 00000000 | Licensed MI · OH · SC · TX · VA | Resident TX | Appointed with 3 carriers | E&O through Dec 13, 2026

NPN (National Producer Number): 00000000 Copy

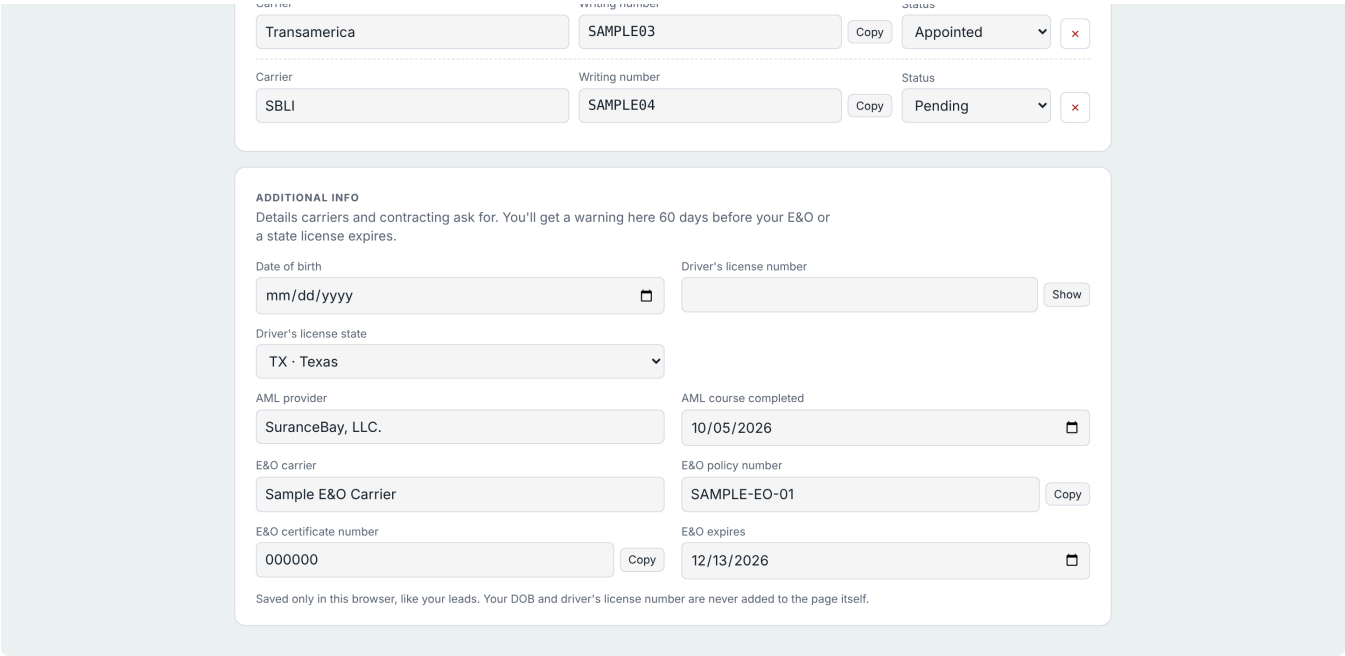

State	License number		Expires	
MI · Michigan	0000001	Copy	mm/dd/yyyy	Make resident ×
OH · Ohio	0000002	Copy	mm/dd/yyyy	Make resident ×
SC · South Caroli	0000003	Copy	mm/dd/yyyy	Make resident ×
TX · Texas	0000004	Copy	mm/dd/yyyy	Resident ×
VA · Virginia	0000005	Copy	mm/dd/yyyy	Make resident ×

CARRIER WRITING NUMBERS

+ Add carrier

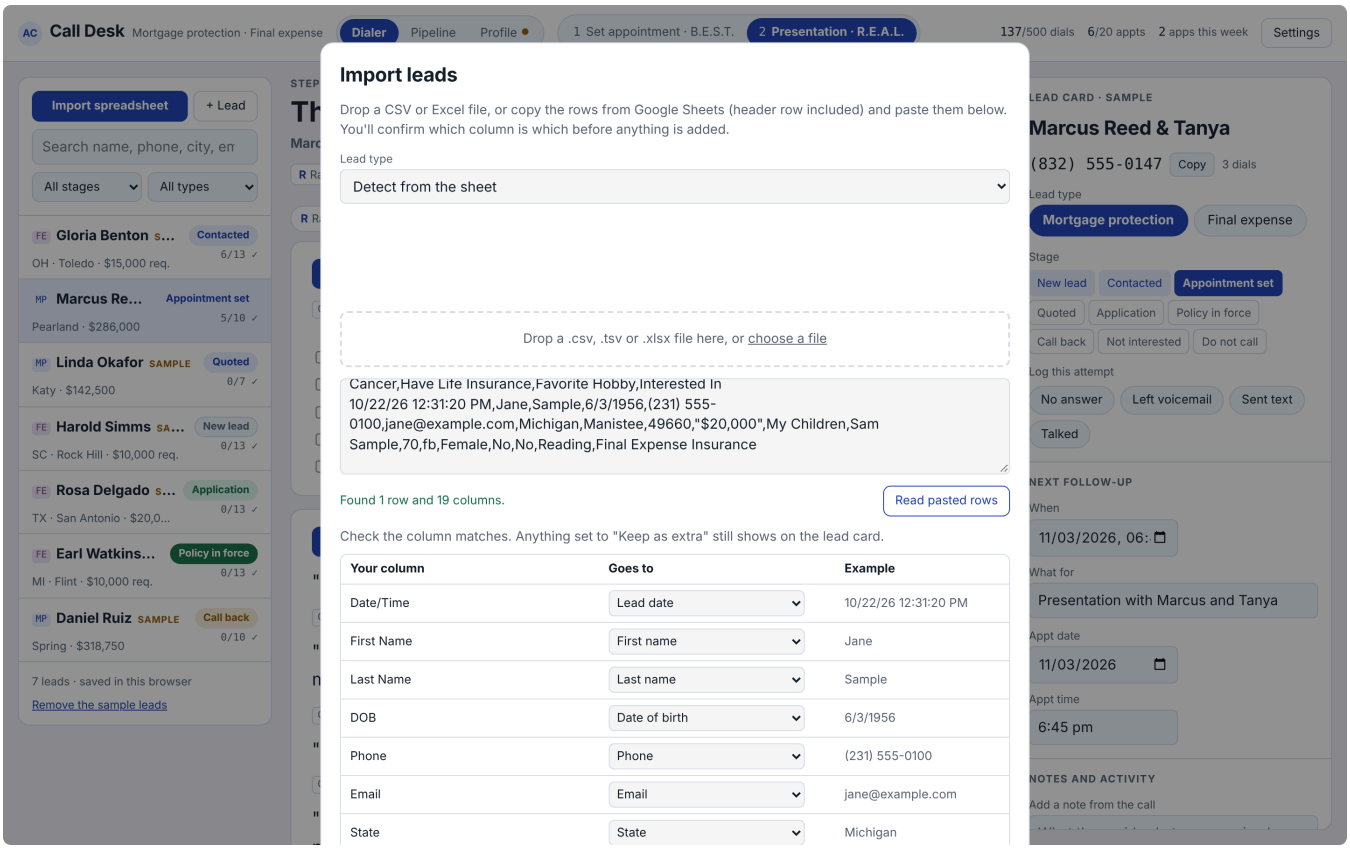

These carriers fill the carrier suggestions in the scripts, and your writing number shows up when you pick a carrier on an application.

Carrier	Writing number		Status	
Mutual of Omaha	SAMPLE01	Copy	Appointed	×
Americo	SAMPLE02	Copy	Appointed	×

4. Import

A modal that takes a dropped or chosen CSV, TSV or Excel file, or pasted rows. It shows every column with a guessed match the agent can change, plus an example value, then adds the leads and reports how many it skipped as duplicates.

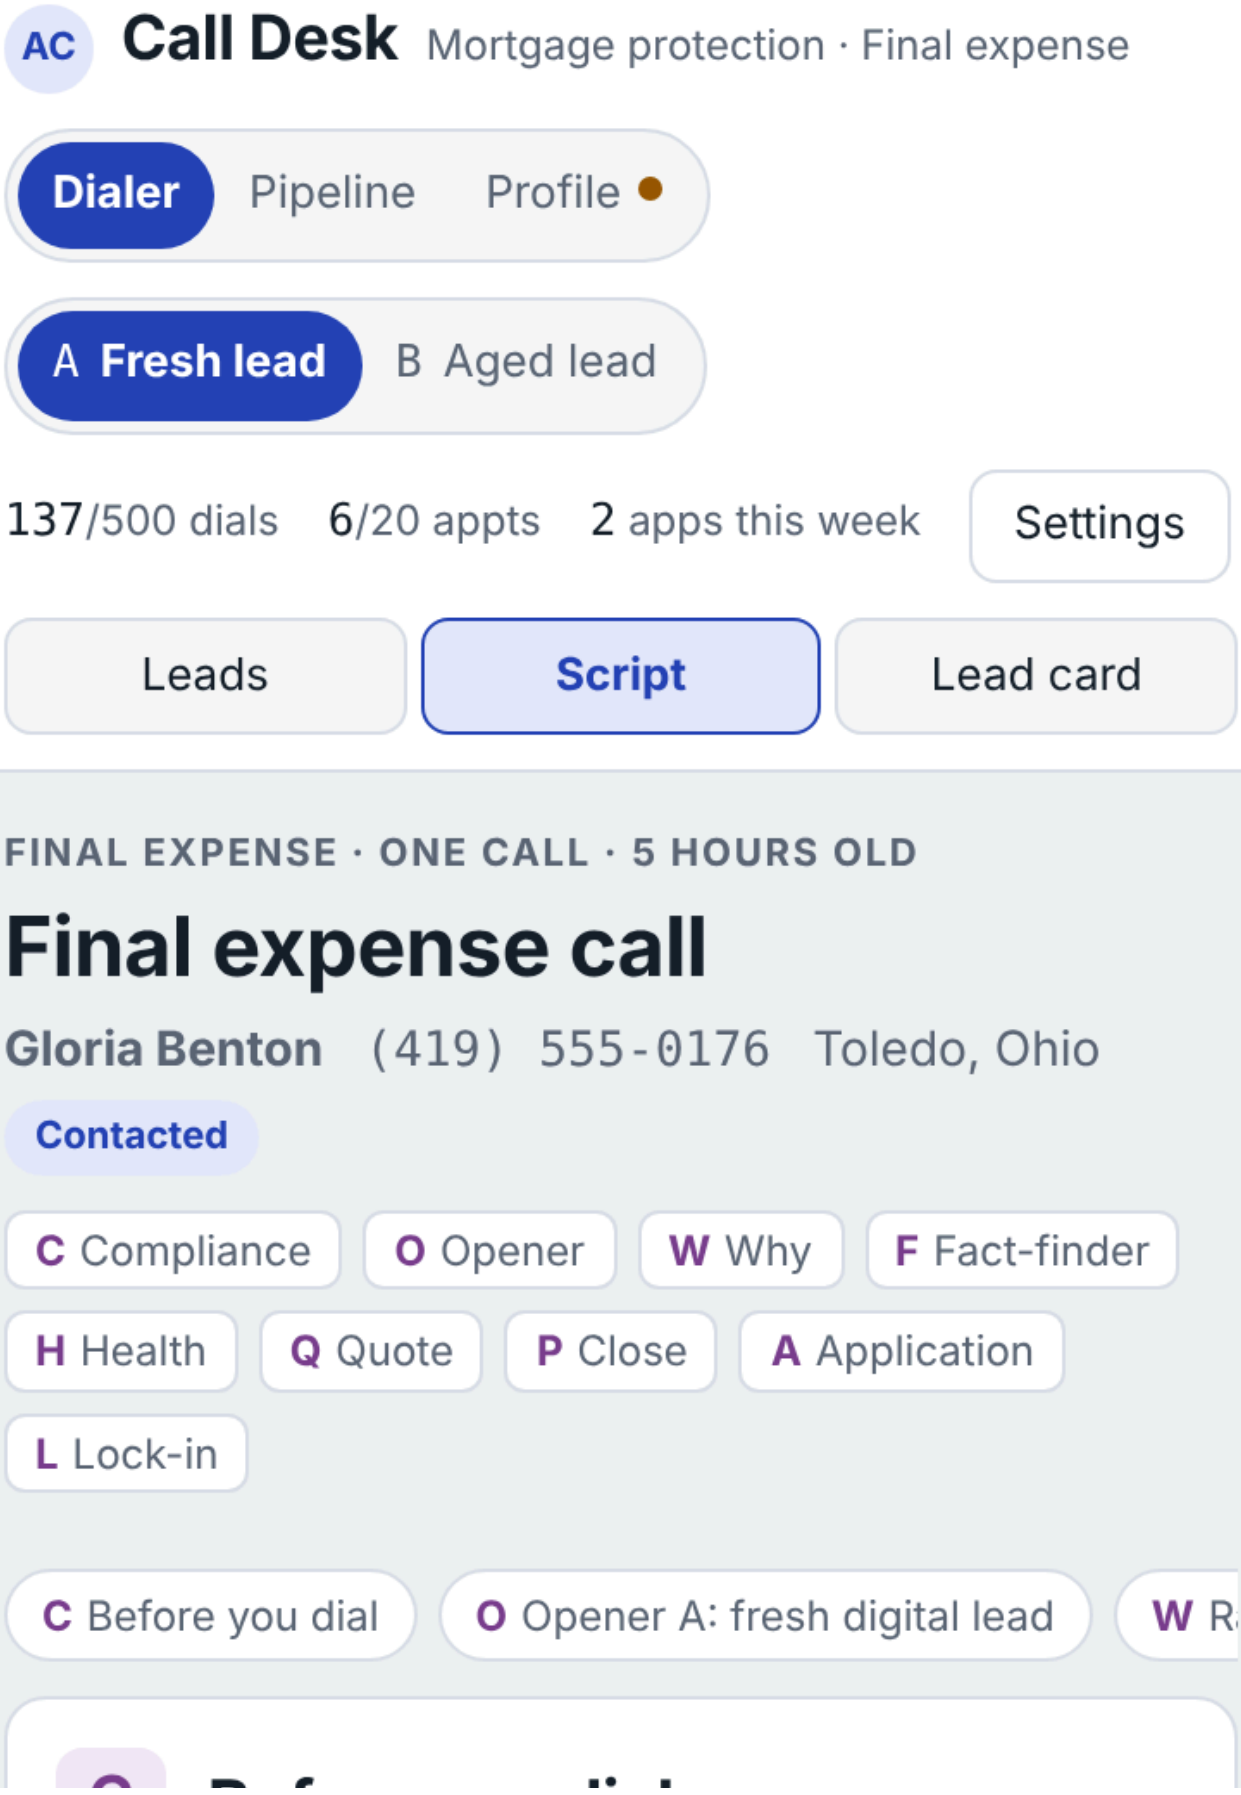

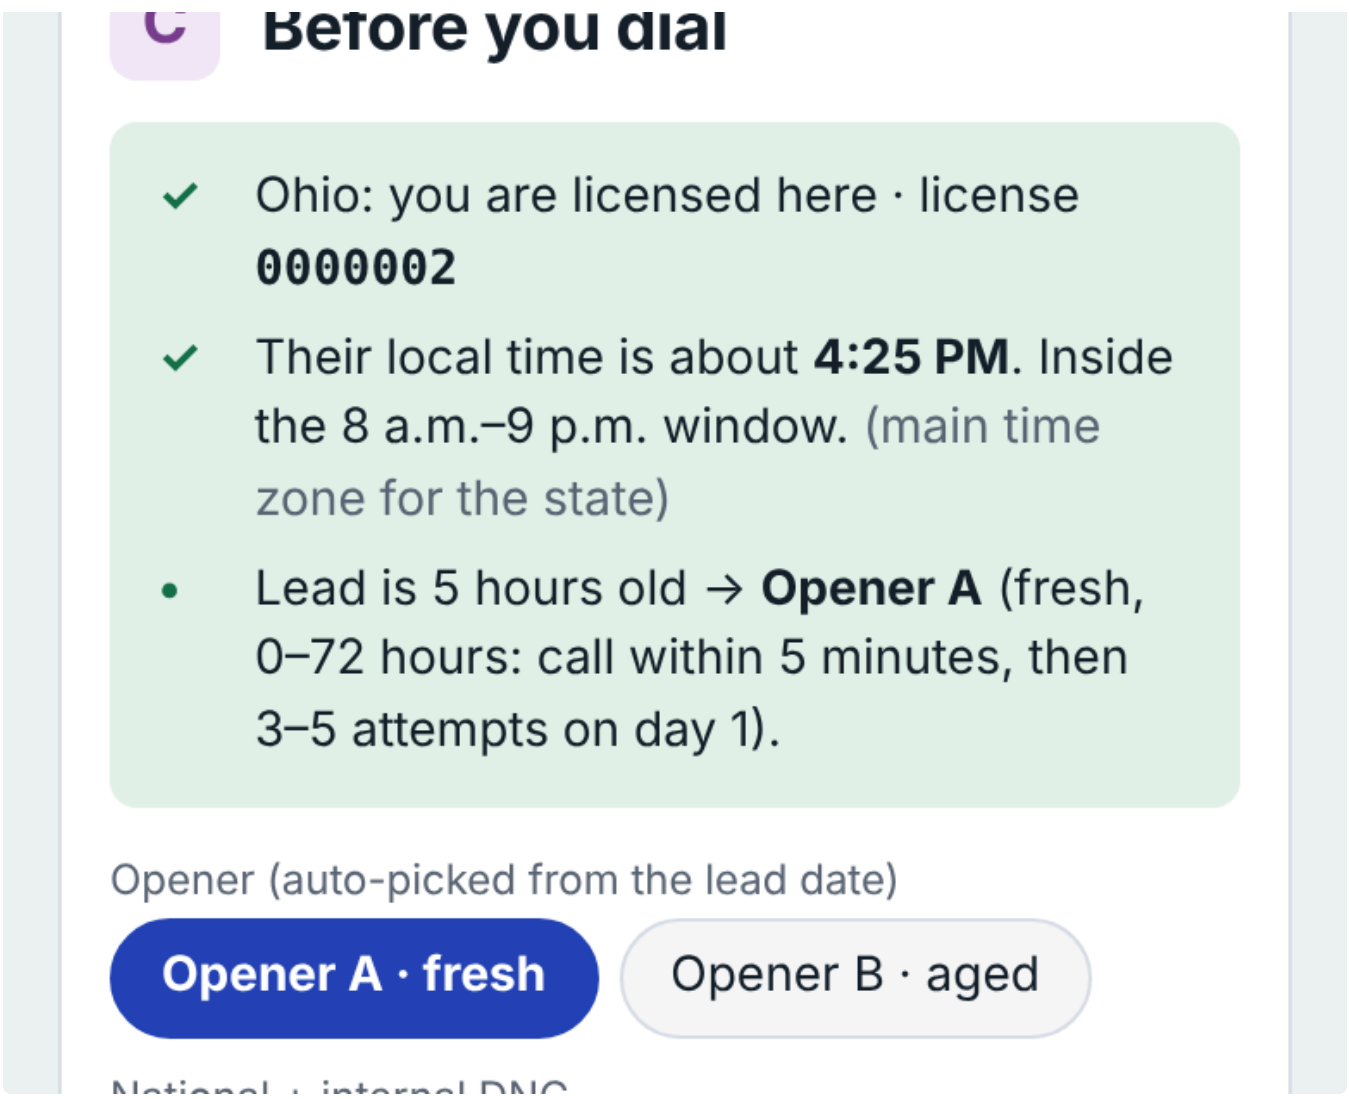

5. Settings

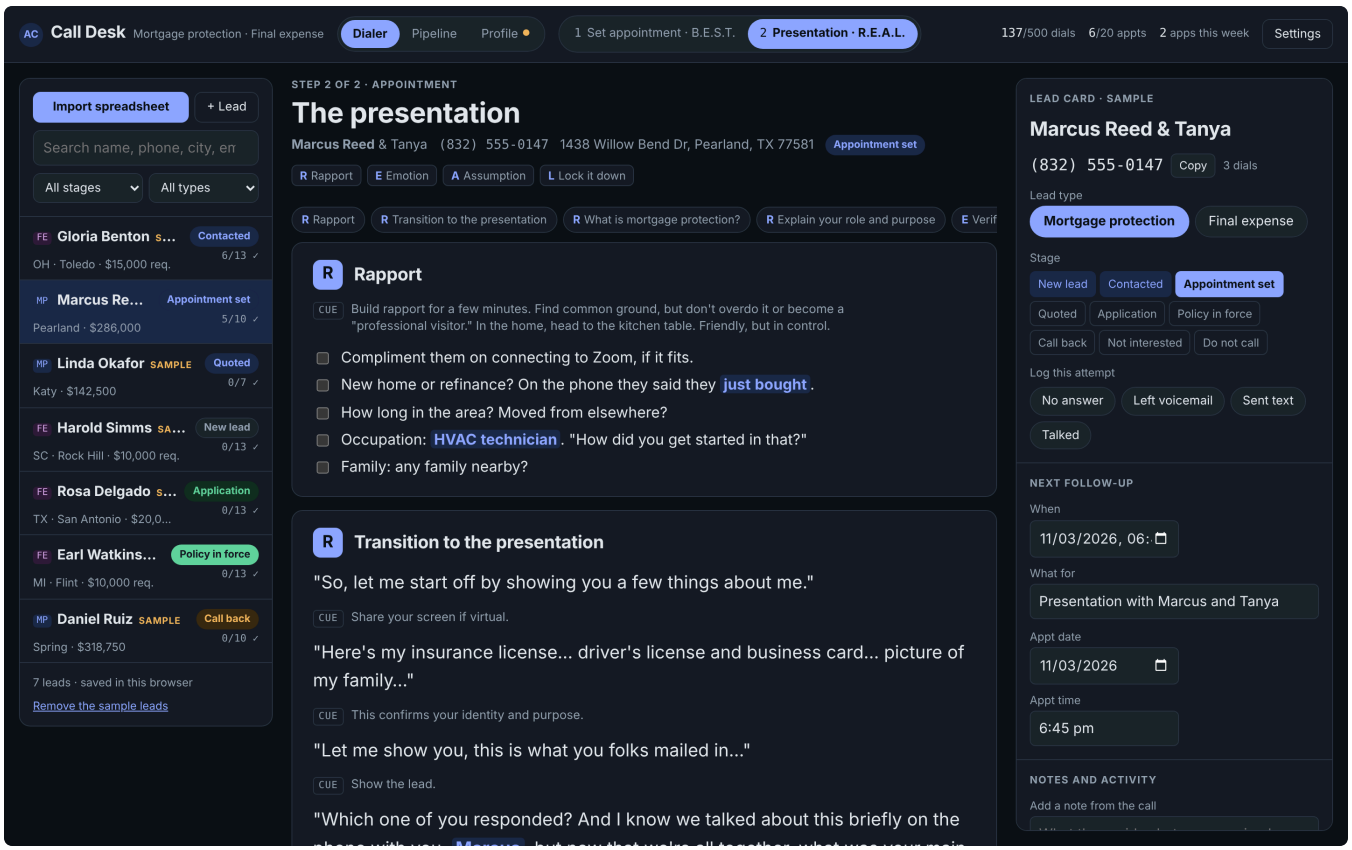

A small modal with the two appointment offer times used in the funnel (default 5:15 pm and 6:45 pm) and Export all leads as CSV. Everything else about the agent lives in Profile.

Phone and dark mode

Under 1080 px wide the three columns become one, with a Leads / Script / Lead card switch in the top bar; picking a lead jumps to its script. Dark mode follows the device.

Lead data model and import

Every lead is one record with a `type` of `mp` (mortgage protection) or `fe` (final expense). The type decides which script, verification list and snapshot it gets. Fields fall into five groups: from the vendor, captured on the call, verification, CRM and policy.

Fields from the lead vendor

Field	Type	Used by	Notes
firstName, lastName	text	both	Full name column is split on import
phone, email	text	both	Phone digits drive duplicate checks
address, city, state, zip	text	both	State stored as given, shown as full name, checked by 2-letter code

Field	Type	Used by	Notes
dob	date	both	Accepts 6/3/1956, 1956-06-03, 6/3/56 and Excel serial dates
age	number	both	Computed from DOB when DOB exists; "N/A" ignored
gender	Male / Female	both	Needed for quoting
loanAmount, lender	money, text	mp	
spouseName, spouseDob, spouseAge	text, date, number	mp	Spouse present = married by default
amountRequested	text	fe	Kept as the vendor wrote it ("$30,000+"), parsed to a number when needed
beneficiary, benRel	text	both	Vendor "Beneficiary" = relationship, "Beneficiary Name" = name
hasLife, heartStrokeCancer	Yes / No	fe	Normalized from yes/no/true/1
hobby, platform, ad, interestedIn	text	fe	Platform fb/meta/ig/google mapped to Facebook, Instagram, Google in the script
trustedForm	URL	fe	TrustedForm consent certificate, shown as a link on the card
leadSource, leadDate	text, date-time	both	leadDate sets the fresh/aged opener
extra	key/value	both	Any unmatched column, shown under "Other columns from your sheet"

Fields captured on the call

- **Mortgage CQF:** married, health, tobacco, spouseTobacco, meds, hospital, spouseHealth, spouseMeds, history, hwA, hwB, occupation, spouseOccupation, schedule, spouseSchedule, loanTerm (15/30/other), monthlyPayment, children,

mainConcern, goal, coverageFor, purchaseType (bought/refi), stayNow, apptDay, apptTime.

- **Mortgage presentation:** benFull, homeValue, otherBills, debtTotal, retirement, inPlaceA/B, lifeA/B, lifeAType/BType (through work / personal / none), incomeA, incomeB, otherIncome, lossA, lossB, program (full / partial / cp), monthsNeeded, optCov1–3, optPrem1–3, chosen (1–3), carrier, referrals, surveyNotes, followUp.
- **Final expense:** opener (A/B override), dncChecked, remembers, agedBranch (never / got / forgot), existingCarrier, existingPays, healthChanged, family, handler, pastFuneral, why, burialPref, benFull, benDob, lifeA, lifeAType, incomeSource, payday, budget, hqHeart, hqCancer, hqCopd, hqDiab, hqKidney, hqHosp, hqMemory, hqTerminal, qpHealth, qpNic, carrier, planType (level / graded / gi), waitYears, amBest, carrierYears, optCov1–3, optPrem1–3, chosen, lowerAmt, lowerPrem, draftDate, referrals.

Verification, CRM and policy fields

- **Verification:** `v` maps a field to `ok` or `fixed`; `orig` keeps what the lead said before a fix.
- **CRM:** status (stage), stageAt (date each stage was reached), dials, lastDial, log (activity entries), followAt, followWhat, step (1 or 2 for mortgage), sample flag.
- **Policy:** carrier, polCov, polPrem, appDate, draftDate, policyNo, effDate.

Import rules

- **Input:** CSV, TSV, .xlsx/.xls (first sheet) or pasted rows from Google Sheets. The first row is the header.
- **Column guessing:** headers are lowercased and stripped of spaces and symbols, then matched against synonyms. For example `amtrequested` maps to amountRequested and `datetime` to leadDate; any header containing heart, stroke or cancer maps to heartStrokeCancer. The agent can change any match, keep a column as extra, or ignore it.
- **Type:** a lead-type picker (Detect / Final expense / Mortgage protection). Detect marks a row `fe` when Interested In mentions final expense, burial or funeral, or when it has an amount requested but no loan amount.
- **Skipped rows:** a row with no first name, last name or phone. Duplicates are a phone digit match or the same name and street address.

- **On import:** each lead gets an "Imported as … lead" activity entry and starts at New lead.

The current vendor file (GOAT final expense leads) maps every column automatically:

Vendor column	CallDesk field
Date/Time	leadDate
First Name / Last Name	firstName / lastName
DOB, Age, Gender	dob, age, gender
Phone, Email	phone, email
State, City, Zip	state, city, zip
Amt Requested	amountRequested
Beneficiary / Beneficiary Name	benRel / beneficiary
History of Heart Attack Stroke Cancer	heartStrokeCancer
Have Life Insurance	hasLife
Favorite Hobby	hobby
Ad, Platform, Interested In	ad, platform, interestedIn
Trusted Form URL	trustedForm
Status, OTP Code, IP Address	extra (vendor's own status is not the CallDesk stage)

Dynamic scripting engine

Scripts are data, not hard-coded screens. Each script is a list of sections (an id, a method letter, a title, an optional show-when rule), and each section is a list of blocks. Store them as JSON in the database so scripts can be edited later without code changes.

Block types

Block	Renders as	Fields
say	Large spoken line, in quotes	text, showWhen
cue	Small quiet coaching note with a label (Cue, Rule, Posture, Mindset, Why, Source)	text, label, showWhen
rule	Cue with a red Rule label	text, showWhen
note	Tinted box	text, showWhen
sub	Sub-heading inside a section	text
ask	Numbered question with inline inputs and an optional "Why" note	number, question, fields[], showWhen, why
fields	Row of inputs with no question	fields[], showWhen
verifyLine	Small line holding verify chips	text
list	Checklist the agent ticks as they ask	items[], showWhen
calc	Computed box or computed spoken line	function of the lead
action	Button that changes the lead (stage, step, dial)	label, action, showWhen
dialRow	No answer / Left voicemail / Sent text / Talked	—
healthGrid	Yes/No row per final expense health category	—
optionRows	Three coverage + premium rows (labels depend on program)	—

Field kinds inside ask/fields: text, area, money, date, date-time, select, carrier (text with carrier suggestions), seg (pill buttons; tapping the selected pill clears it), line (verify text). A yes/no seg shows Yes in red and No in green when picked.

Tokens

- `{{token}}` in any text is replaced live with a lead value or a computed value. If the value is missing, the agent sees an amber placeholder such as [beneficiary] in the sentence.
- A token with an empty placeholder (`andSpouse`) simply disappears when it doesn't apply.
- Two inputs bound to the same field stay in sync anywhere on the page.

Token	Value
first, last, full	Lead name
agent, agency, agentPhone, npn	From Profile (name, agency said on calls, callback number, NPN)
licNum	Agent's license number for the lead's state
age, nextAge, bday	Age from DOB; next age; birthday as "June 14"
spouse, andSpouse	Spouse name; " and Tanya" or nothing when single
beneficiary, benFull, benIsnt	Name; full legal name; "isn't" or "aren't" ("Lisa and Richard aren't stuck…")
loan, halfLoan, payment, homeValue, equity	Money values, equity = sale value − loan
concern, goal, occupation, purchase	From the CQF ("just bought" / "refinanced")
apptDay, apptTime, timeA, timeB	"tomorrow, Wednesday, November 4"; offer times from Settings
breadwinner, survivor	Higher-income spouse and the other
incomeA, months, chosen	Monthly income; months of payments; picked option as "Silver plan, $15,000 of coverage, $52 a month"
when	"this morning" / "today" / "yesterday" / "on Thursday" / "a while back" from lead date
platform	Facebook, Instagram or Google from the vendor's platform code

Token	Value
oneDetail	One real detail: beneficiary name, else birthday, else city
cityOrMonth	City, else birth month
state, city, hobby, amountReq	Lead values
carrier, amBest, years, planLine	Quote details; planLine = "day-one coverage…" or "a plan with a 2-year waiting period…"
payday, draftDay	"3rd" and "4th" when payday is a number
budget, feCov1–3, fePrem1–3, lowerAmt, lowerPrem	Final expense option amounts

Verify chips

- `[[v:field]]` in a line renders a chip with the lead's value, a ✓ button and a Fix button.
- ✓ marks it verified (green); tap again to clear.
- Fix turns the chip into an input; Enter or leaving the box saves. The field becomes "Corrected" (amber outline) and the original value is kept and shown as "Lead had: …".
- The card shows the full list with a count ("6 of 13"). Mortgage list: first name, phone, email, address, loan amount, age, DOB, spouse name, spouse age, spouse DOB (spouse ones only when married). Final expense list: first name, last name, DOB, age, phone, email, state, city/ZIP, amount requested, beneficiary, relationship, has life insurance, heart attack/stroke/cancer.

Show-when rules used

Married or single; stayNow yes or no; opener A or B; aged branch (never, got, forgot); existing coverage pays (waiting period or day-one); doesn't remember the form; employer coverage; personal coverage (replacement rule); program (full, partial, critical period); age over 65; suggested road; plan graded or guaranteed issue; a health flag of yes on the form.

Calculations

- **Age:** from DOB on today's date. A manual age fix overrides it.
- **Equity** = home value − loan. **Monthly bills** = mortgage payment + other bills. **Income** = income A + income B (married) + other.
- **Cash flow:** extra each month = income − bills. Survivor left = income − the passing person's income (or the amount entered as lost) − bills, shown red when negative, for each spouse or for the family when single.
- **Suggested road (mortgage):** over 65 → Critical Period. Any health answer that isn't "none/no/healthy" → Partial or Critical Period. Otherwise → Full or partial, and hide Critical Period.
- **10% rule:** anchor premium = 10% of the monthly mortgage payment, with options above, at and below it. The middle option should land near $80–$100 a month.
- **Critical period options:** months they say ±3 (minimum 1) × monthly payment.
- **Breadwinner:** the higher of income A and income B.
- **Opener:** lead 72 hours old or less → A (fresh), else B (aged). The agent can override.
- **Funnel dates:** today, tomorrow, and the 48-hour limit.
- **Final expense health summary:** count of yes answers across 8 categories, with "level, day-one candidate" or "check carrier underwriting".
- **Coverage for the quote link:** the picked option. If none is picked: Silver for final expense, else amount requested. Mortgage: full loan, half for partial, months × payment for critical period.
- **Height and weight:** parsed from free text ("5'10, 180", "6 1 210") into feet, inches and pounds.
- **Term for the quote link:** 30-year loan → 30, 15-year loan → 20, editable.

Mortgage protection scripts

Mortgage leads run in two steps. Step 1 (B.E.S.T.) is the first phone call that verifies the lead, fills out the client qualification form and books the appointment. Step 2 (R.E.A.L.) is the presentation at the appointment. The Symmetry SFG Mortgage Protection script is merged into both: its intro, the why, the CQF items and the Pivot in Step 1; the FIF, employer-coverage follow-up, loss-of-income questions, living benefits, carrier policy delivery, Referral and Reset in Step 2. If the client can stay on the line at the Pivot, the agent goes straight to Step 2 on the same call.

How to read the script below: `>` lines are spoken; *italic* lines are cues; **Q** lines are questions with the fields they capture; `{{token}}` is a live fill; `[[v:field]]` is a verify chip; *(show when …)* is a show-when rule.

Step 1 · Set the appointment (B.E.S.T.)

B · Be busy

[Calculated] Weekly dials vs the 500 goal, appointments vs 20, dials to this lead.

Note: Pick up the phone. This is a numbers game: the more dials, the more appointments, the more families you help. Most successful full-time agents make 500+ dials a week, or dial until they have 20+ appointments to submit $5,000+ APV weekly.

[Dial outcome buttons] No answer · Left voicemail · Sent text · Talked

E · Establish the reason you're calling

Mindset: They sent in a request asking for help. Now it's your turn to help them get the coverage they deserve.

> "Hey, {{first}}."

Cue: Wait for response.

> "Hey, this is {{agent}}. I'm calling about your mortgage over at [[v:address]]. Looks like it's for [[v:loanAmount]]."

Cue: Pause and wait.

> "I was getting back to you about the form you responded to regarding the mortgage protection coverage that would help pay the mortgage for your family if something were to happen. I just needed to quickly verify the information you provided so we can get those options worked up for you."

> "You had put down that you're [[v:age]]. Is that correct? And when do you turn {{nextAge}}? When's your birthday?"

Verify line: Birthday on the lead: [[v:dob]]

Q Married, or a spouse on the loan?

- Capture: married (Married / Single); spouseName *(show when married)*

> "And I have {{spouse}}'s age as [[v:spouseAge]] and date of birth as [[v:spouseDob]]?" *(show when married)*

Cue: Start filling out the client qualification form (CQF) below.

E · The why: who's counting on them

> "Now, one of the most common needs my clients have is that if something were to happen, their family would need to be able to keep paying bills, manage their life and kids, and take care of the mortgage. Is that how you feel?"

Q "God forbid something were to happen to you, who would be financially responsible for the bills?"

- Capture: beneficiary (name); benRel (relationship)
- Why: Capture the name and relationship.

> "Would {{beneficiary}} be your beneficiary on this plan?"

Q "Can I ask, did you guys just buy your home, or did you refinance it?"

- Capture: purchaseType (Just bought / Refinanced)
- Warm-up checklist: "Congratulations!" · "How do you like living there?" · "What made you choose that area?"

E · Client qualification form (CQF)

> "I have a couple of quick questions so I can make sure I'm looking at the right companies for you."

1. "How's your health? Any medical issues?" Capture: health.
2. "Have you used any nicotine or tobacco in the last 12 months? You don't plan on starting this weekend, do you?" Capture: tobacco (No / Yes); spouseTobacco *(married)*. Why: get a laugh and put them at ease.
3. "What medications does your doctor have you on?" Capture: meds.

4. "Any hospital stays, ambulance rides or major surgeries for you in the past 10 years or so?" Capture: hospital.
5. "And how about {{spouse}}? Anything for them?" *(married)* Capture: spouseHealth; spouseMeds.
6. "Is there any history of things like high blood pressure, diabetes, cancer or heart attack for either of you?" Capture: history.
7. "And then, just ballpark, what's your height and weight?" Capture: hwA (placeholder 5′10, 180); hwB *(married)*; gender (Male / Female).
8. "What do you do for work? Anything dangerous, like a stunt man or rodeo clown?" Capture: occupation; spouseOccupation *(married)*. Why: get a laugh.
9. "And what does your work schedule typically look like? 9 to 5, Monday through Friday?" Capture: schedule; spouseSchedule *(married)*.
10. "It says the amount of the mortgage to be paid off is [[v:loanAmount]]. Is that correct?"
11. "And did you guys go with a 15 or a 30-year loan?" Capture: loanTerm (15-year / 30-year / Other).
12. "And what's the monthly payment on that?" Capture: monthlyPayment.
13. "Do you have children in the house?" Capture: children (how many, names).
14. "Alright, perfect. And most importantly, when you responded to the form, what was the main concern for you? What specifically were you wanting the coverage to do for you?" Capture: mainConcern (the problem); goal (the solution). Why: write it in their words; it's repeated back at the appointment.
15. "Were you looking for coverage on just yourself, or for both you and {{spouse}}?" *(married)* Capture: coverageFor (Just me / Both of us).

S · Pivot: present now or set the appointment

> "We've addressed a lot of things, and if you can stay with me, I can go over some options that will solve the issues we discussed. Does that work?"

> "Is this something you'd want to discuss with someone else before making a decision on protecting {{beneficiary}}?"

Q Can they stay on now?

- Capture: stayNow (Yes, present now / No, set the appointment)

- Why: If married and the spouse isn't on the line, set the appointment so both are there.

[Button, primary] Go to Step 2: the presentation → *(show when stayNow = yes)*

> "I completely understand, I have a busy day too." *(show when stayNow = no)*

S · Set the appointment *(show when not presenting now)*

> "Okay, that makes a lot of sense. I have enough information to start shopping your case across all the carriers. I'll need some time to do that, and then we'll just need to schedule a quick call to go over the options together, see what might make sense for you, and answer any questions you might have. Let me just pull up my calendar."

> "We've had a ton of these requests come in, so my schedule is pretty crazy right now."

Funnel: Begin the funnel: two days, two timeframes, two times.

[Calculated] Today, tomorrow, and the 48-hour limit as dates.

> "I have a couple of openings either today or tomorrow. Which of those would work best?"

Cue: Two days. Book within 48 hours; 24 is ideal.

Capture: apptDay (date).

> "Okay. For {{apptDay}}, would earlier or later in the day work better?"

Cue: Two timeframes. Afternoon or evening? Before 5 pm or after 5 pm?

> "Okay. I have an opening at {{timeA}} or I can squeeze you in at {{timeB}}. Which of those would be better for you{{andSpouse}}?"

Cue: Two times. Change the default offer times in Settings.

Capture: apptTime.

> "It's very important that {{spouse}} is on the call, because if something happens, they're the one who's going to call me." *(show when married)*

T · Tie down *(show when not presenting now)*

> "Okay, and you're positive that time works for both you and {{spouse}} together, correct?" *(show when married)*

Cue: No one-legged appointments. Find a time when both are available. (show when married)

> "Okay, grab a pen and paper and let me know when you're ready. I'm going to give you my information and a few things to have ready for our appointment."

> "Go ahead and write down my name. It's {{agent}}. Then write down 'Mortgage Protection.' And what time did we say again? Perfect. Go ahead and write that down as well. And just a couple things to have ready before our call: make sure you have your doctor's info and any medications you're on, just have those available."

> "And what's a good email for me to send the appointment confirmation to?"

Verify line: Email on the lead: [[v:email]]

> "Okay, I have us down for {{apptDay}} at {{apptTime}}. Sometimes the families I'm working with need a little extra time, so give me about a 15-minute window, just in case, and I'll make sure I give you the time you need as well. If I'm running more than 15 minutes behind, I'll make sure I let you know."

> "I really value our time and do my best to keep a tight schedule for everyone. If we aren't able to meet at {{apptTime}}, it will impact my ability to help another family during that time."

> "Have a great day and we'll talk to you on {{apptDay}} at {{apptTime}}."

[Button, primary] Mark appointment set → stage Appointment set

Power phrases (lead card, Step 1 only): "That's exactly why I'm calling." · "Here's what we're going to do." · "Let's do this…" · "I can try to squeeze you in at {{timeB}}." · "Grab a pen and let me know when you're ready." (not "Can you grab a pen?") · If they say "Can you just email me / call me back later?": "That's a great idea! I'll be super brief. Let me verify your information quickly, then I'll get your options out to you." · We never email options; the first call books the appointment, and options are shared live.

Step 2 · The presentation (R.E.A.L.)

R · Rapport

Cue: Build rapport for a few minutes. Find common ground, but don't overdo it or become a "professional visitor." In the home, head to the kitchen table. Friendly, but in control.

Checklist: Compliment them on connecting to Zoom, if it fits · New home or refinance? On the phone they said they {{purchase}} · How long in the area? Moved from elsewhere? · Occupation: {{occupation}}. "How did you get started in that?" · Family: any family nearby?

R · Transition to the presentation

> "So, let me start off by showing you a few things about me."

Cue: Share your screen if virtual.

> "Here's my insurance license… driver's license and business card… picture of my family…"

Cue: This confirms your identity and purpose.

> "Let me show you, this is what you folks mailed in…"

Cue: Show the lead.

> "Which one of you responded? And I know we talked about this briefly on the phone with you, {{first}}, but now that we're all together, what was your main concern?"

Cue: This is their "surface why."

[Calculated] Box: "On the phone they said" with the main concern and goal from Step 1.

> "So, what I'm hearing is {{concern}}. Is that right? Well, that makes sense for sure. And how long have you guys been thinking about this kind of protection?"

Cue: Repeat it back in your own words.

R · What is mortgage protection?

> "OK, {{first}}, real quick let me explain what mortgage protection is. You probably already know, but it's a life insurance policy for homeowners that will pay off the mortgage or make mortgage payments while the family is in transition after someone dies. Mortgage protection can also be used to replace income if the breadwinner has a critical illness or disability in their working years."

> "Now, this is not the old kind of mortgage protection, meaning your lender will not be your beneficiary. So, who would your beneficiary be?"

Fields: beneficiary; benRel. *Cue: Write this down.*

> "So, {{beneficiary}} will receive the benefit. One of the other major differences is that this is not a decreasing term. In other words, if something happens to you tomorrow or 10 years from now, your death benefit will remain the same. This policy is also portable, so if you refinance or move, you can take this mortgage protection with you."

> "Now, some people do a full mortgage payoff if that's in the cards. Some do half. A lot of people just do a little bit, just a little bit to help their family with the transition to the next step, okay? It really depends on two things. First, it depends on budget; everyone's got a budget. And second, it depends on what you qualify for in terms of age and health. Make sense?"

Cue: Wait for a response. Keep them accountable to your questions early; it carries through the whole presentation.

> "Now, it's important to know most people already have life insurance. It's really common. Some have it through work, some have their own policy, some have 401(k) money, maybe a rich uncle. I'm still waiting on mine. Some have money in the bank. In other words, we all work to build up a nest egg, right?"

> "That's why people get mortgage protection separately. They don't want their family to have to use the nest egg money to pay for the mortgage. They want that nest egg to go to the family, and they want the insurance company to pay off the mortgage debt. It's another way people use life insurance nowadays. Does that make sense?"

R · Explain your role and purpose

> "My role in all of this is what they call a 'field underwriter.' Each week I work with 12 to 15 families in your area who have all requested this type of insurance. I have access to all the top-rated companies that offer this coverage, so I'm able to shop around for you. My job is to find you the best coverage you qualify for at the best price."

Cue: This eliminates the "I need to shop around" concern.

> "So, there are a few things we'll do today. I'm going to verify your health information. Some carriers are super picky about prescriptions and medical concerns, others are not, so I need to know the details so I can match you with the best company. I don't work for any one company. I work for you. So please be honest with me so I can help get your family protected. The good news is you don't have to see a nurse or give blood or urine with these programs."

Cue: Eases their mind about health issues and builds trust.

> "Then I have some detailed questions about your mortgage and your finances. Some of these might even be uncomfortable for me to ask, but I'm not doing this to be nosy. I'm doing it to make sure, in my professional opinion, that you have a need for this coverage. Not everyone has a need, and if that's the case with you, I'll let you know honestly and be on my way. We find most people need way less than they think, and if that's the case I can save you some money and be the hero."

Cue: Sets up Critical Period or partial payoff, and explains why you ask about finances.

> "Once we narrow this down to a few programs I think you'll qualify for, your job is to pick out the program that best suits your needs and your budget."

Cue: Gives them an active role in the process.

> "As we're talking, I'll be filling out some paperwork on my screen, and this is what we'll be submitting to the insurance company tonight to get their final approval, which could take two to seven days. Once they approve the application your family will be protected. It usually takes about 10 to 14 days to get the policy mailed to you, and then we'll get back on the phone or computer, go over everything together in detail, and make any changes if needed. Sound good?"

Cue: This gets your first "yes."

E · Verify health

Emotion: Health is the easiest place to start: you began it on the phone and it's less emotional. Finances come next and do the heavy lifting for creating the emotion.

> "First, we need to verify the medical side to confirm which carriers you would qualify with."

Cue: Review the CQF from the phone call. Edit anything that changed.

Fields (same fields as the CQF, editable here): health, meds, hospital, history, hwA, tobacco; spouseHealth, spouseMeds, hwB, spouseTobacco *(married)*.

> "I'm going to share my screen and run through a list of about 15 health questions. Some of these are going to sound crazy, but I have to ask them anyway. And if any are 'yes,' don't worry. I just need your full honesty like I mentioned earlier. So just really quickly, what medications are you prescribed…"

E · Financial information form (FIF)

Cue: Required for every client. It also sets up future Preferred Client Services needs.

> "Okay, so now I want you guys to grab a pen and paper and let me know when you're ready."

Cue: Virtual: share a whiteboard or fill the FIF with them watching. Have them actively participate.

> "So that we can get a better picture of what cash flow would look like, we're going to do a quick financial review."

Q "What do you do for a living, and what do those hours look like?" Capture: occupation, schedule; spouseOccupation, spouseSchedule *(married)*.

Get the equity number. *Cue: A critical step for any equity protection plan during the critical period.*

> "So, your mortgage is about [[v:loanAmount]], right? Let's write that at the top of the page. And let me ask you: if you had the time to prep the home and put it on the market tomorrow, and didn't have to take a low offer, you were patient and got the full value, what would it sell for?"

Capture: homeValue.

[Calculated] > "Okay, write that number next to what you owe. If we subtract what is owed from what it would sell for, we get {{equity}} in equity. Is that what you see as well?"

Cue: People should be proud of their equity. Congratulate them.

> "And that's today. Ten years from now it's thousands more; 15 or 20 years from now it can be hundreds of thousands more. As time goes by, what you owe goes down and what it's worth goes up. This equity is often the biggest part of the legacy left for a family. Does that make sense? Let's write the equity just below those numbers."

> "For most families, the number one job for mortgage protection is to make sure that equity stays with the family and never walks out your front door, right? That's your family's money, part of your nest egg. It should never go to the bank or to a low-ball investor buying your home as a distressed sale, right? So, at a minimum, we need to protect that equity. Do you see that?"

E · Quick budget

Cue: List the mortgage payment, major debts and major monthly expenses. Approximate numbers only; don't frustrate them with detail. This heads off "we need to check our budget."

1. "Your monthly mortgage payment is {{payment}}, right?" Capture: monthlyPayment.
2. "Roughly, if you had to estimate your utilities, groceries, car payment, cell phone, internet, all of your bills, what would that run you per month?" Capture: otherBills.
3. "And total debt: credit cards, revolving loans, student debt?" Capture: debtTotal.
4. "Are we putting any money towards retirement?" Capture: retirement.

[Calculated] > "When we add this up, it looks like about {monthly payment + other bills} comes out for the bills every month. Does that seem about right?"

E · Uncover the cash flow problem

Cue: Cash flow is the problem we're solving. Helping them see the cash flow problem when someone passes creates the emotion.

> "Now, let's make two columns on the page. One for you, {{first}}, and one for you, {{spouse}}." *(married)*

> "{{first}}, if you didn't come home last night, what is already in place that would pass on to {{spouse}} to help keep this house and this lifestyle, like other life insurance, savings, retirement accounts?" *(married; single version names {{beneficiary}} and "help with this house")*

Fields: inPlaceA, lifeA, lifeAType (Through work / Personal / None).

> "And {{spouse}}, same questions for you: what's already in place today that would pass on to {{first}} to help keep the house and the lifestyle?" *(married)* Fields: inPlaceB, lifeB, lifeBType.

> "Perfect. That usually covers the loss of about one year's income if you die while you're employed there. What do you have in the way of personal life insurance to protect your mortgage and family? Great, what's that coverage amount, and what's the monthly cost?" *(show when either coverage is through work)*

> "Okay, let's talk about income. {{first}}, what do you bring in on a monthly basis? And {{spouse}}?" *(single: without the spouse)*

Fields: incomeA, incomeB *(married)*, otherIncome.

> "Any pensions for either of you? Military benefits? Any other income?"

[Calculated] > "So, it looks like approximately {total income} is coming into the house every month, correct?" *Cue: Write down this total.*

> "Now, if something happened to you first, {{first}}, how much money would stop coming into the house from your side every month? Would any income transfer over? Okay. And what about you, {{spouse}}, how much would stop coming in if something happened to you?" *(married)* Fields: lossA, lossB.

Cue: Leave blank to assume their full income stops. Social Security: if married, the surviving spouse keeps the higher of the two benefits and the other goes away. Ask if they understand how that works.

E · Cash flow analysis

[Calculated] Table: combined monthly income, approximate household expenses, extra each month. Then:

> "Based on the information you gave me, it looks like we have about {extra} in extra income per month. Does that sound right to you?"

> "Without {first}'s income, it looks like you would be left, {spouse}, with {amount}. And without {spouse}'s income, it looks like you would be left, {first}, with {amount}. Is that what you guys see?" *(single: "Without your income, {first}, it looks like {beneficiary} would be left with {amount} a month.")* Negative amounts in red.

Cue: The cash flow problem should be obvious now. Take your time and let it sink in.

> "Okay, I can better understand now why you responded to the letter."

E · Quality questions

Cue: Pick a few based on the situation, the program and your preference. Tick them off as you go.

Married checklist: "How long would you want to stay in this house by yourself?" · "How long could you stay in this house?" · "Where would you want to go?" · "Who would have to move in with you?" · "Knowing this cash flow analysis, what specific challenges would you have?" · "What would you have to do to maintain the mortgage and your lifestyle?" · "What does that look like?" · "How do you feel about that, {{spouse}}?" · "What are your thoughts, {{spouse}}?" · "How long do houses take to sell around here?"

Single checklist: "What would the kids do with this house?" · "Which of your kids would be making this mortgage payment?" · "Do they have a mortgage as well that they would need to also pay?" · "How hard would it be for your kids to make their own mortgage or rent and this one?" · "How long do houses take to sell around here?" · "Would all of the kids move in here together, or would one child most likely need to?" · "Would one child buy out the others?"

Loss-of-income checklist (SFG): "{{first}}, if you passed away yesterday and your {{incomeA}} income was no longer coming into your household, how long would it take before life would become difficult for {{beneficiary}}? Would the kids need to change schools?" · "If something happened to you yesterday, how would {{beneficiary}} take care of themselves?" · "How would life need to change to make it work?" · "How long would {{beneficiary}} want to keep staying in this house if you were to pass away?" · "Can we agree that your family, like most families, would have some tough decisions to make with the loss of an income?"

> "After looking at this, it makes sense. You're a lot like the families I meet with each week. We would be in a tough spot with the loss of an income. I completely understand why you reached out, and this is why I love my job. It allows me to provide peace of mind for responsible people."

A · The "think about it"

Assumption: Assume they want the coverage. Price only matters in the absence of value. Sell on needs; use features and benefits to lock the sale down after it's made.

[Calculated] Suggested road box with the reason (see Calculations).

> "Based on what you just shared with me, let's look at some programs. I'm going to include at least one that is our most comprehensive. I'm not doing that to talk you into spending more than you're comfortable with; I just want to show you all of your options. But I'm going to count on you to be honest about your budget. Sometimes homeowners will beat around the bush and say things like 'I need to think about it, sleep on it.' I've been doing this long enough to know what that means: the price isn't right. So, if what I'm showing you doesn't fit the budget, can I count on you to be honest with me? These are just some of the programs, and we'll definitely find you something tonight that fits comfortably inside your budget as a good starting place, OK?"

A · Explain programs

> "There are three ways to do mortgage protection."

1 · Full payoff. *Cue: Explain full payoff, Living Benefits and ROP to clients 65 or under; ROP and disability riders have age restrictions. If you are going Critical Period, keep this short.*

> "This will make sure the family keeps the home and pays the mortgage off in its entirety. It also provides Living Benefits for critical and chronic illness. If you get diagnosed with a critical illness like cancer, or have a heart attack, you can access the death benefit while you're alive, so you can recover without having to worry about the loss of work or your income. My clients see a lot of value in this feature." *(age 65 or under)*

> "Full coverage is generally the most expensive and hardest to qualify for. And 95% of the time I can find something more affordable for my clients over 65." *(over 65)*

2 · Partial payoff.

> "As we discussed earlier, this is great for families that have two people bringing in income, especially during their working years. Let's say one person can't work or dies. It's always helpful to have half the mortgage paid down, or a big chunk paid down, so it's affordable for the remaining person. For example, if something happens and I brought you a check for {{halfLoan}} even though your mortgage is {{loan}}, would you be mad at me? What could you do with that {{halfLoan}}?"

Cue: Stop and get them to engage: pay down the loan, refinance for a lower payment, a down payment on a smaller place.

> "With your age and health, honestly, {{first}}, this one can also be hard to qualify for. For really anyone over 65. But it is a little cheaper than full payoff." *(road = critical period)*

3 · Critical period / equity protection. *(Hidden with a note "Skip this option: {{first}} is under 65 with no health flags" when the road is full payoff.)*

> "Most of my clients around your age with similar health go for option three. It's the most affordable and the easiest to qualify for. It's called Critical Period Coverage, or Mortgage Payment Protection, because it covers the most critical period of time after the loss of a spouse or loved one, when the family is at most risk of losing the home. Let me explain."

Cue: Start by talking to the person who would be in the most trouble if something happened to the breadwinner.

> "If something were to happen to {{breadwinner}} tomorrow, does the bank come to {{survivor}} and ask for the full {{loan}} you owe? No, they just want what?"

Cue: Stop. Get them to say the bank just wants the payment.

> "People go into foreclosure not because the bank wants the payoff, but because the bank wants the payment. It would be nice if the bank called and said, 'We're so sorry for your loss, we're going to waive your payments for the next six months to a year,' but they don't do that, do they? They probably won't even know someone has died. They just want the payment."

> "What this program is going to do for you is buy you some time. Time to grieve properly, time to make a plan, and time to put the house on the market long enough to get top dollar for it, without your family having to come out of pocket for that mortgage payment each month. In my opinion, I wouldn't spend a bunch of money trying to pay off a house you don't plan on staying in anyway. Instead, the policy would cover mortgage payments long enough to sell it and get out the equity. That equity can become the benefit for {{beneficiary}}, the legacy for your family. Many times the equity in the home is the biggest asset a family has! Does that make sense?"

> "Of these three ways I just described, which one should we begin pricing?"

Capture: program (Full payoff / Partial payoff / Critical period).

A · Show options

[Calculated] Quote sheet: state, age, DOB, tobacco, height/weight, health, meds, history, spouse, loan, payment, program.

Fields: qpHealth (PP · Preferred Plus / P · Preferred / R · Regular); qpNic (Never / Currently / Recently quit, defaulted from tobacco); qpTerm (10 / 20 / 30, defaulted from loan term).

[Calculated] Quoteplicity box (see Integrations), then the anchor box: 10% rule for full or partial, or months for critical period.

> "Knowing that most people will need at least a few months to grieve, how long do you think it would take you or your kids after that to make a plan, pack up, get the house ready to sell and allow time on the market for it to receive the highest offer?" *(critical period)* Capture: monthsNeeded.

[Option rows] Option 1–3, each coverage and premium per month, labeled "Above 10% / At 10% / Below 10%" or "N months of payments".

Features: Before showing numbers, answer the common questions up front: "Just so you know some more details of this program… this is a ____ (term/whole) life program… premiums won't increase… the death benefit won't decrease… the money is delivered in a lump sum to your beneficiary." Showcase free riders, level premiums, cash value.

A · The close

> "Okay, now which one of these fits most comfortably inside your budget?"

Cue: Be quiet. Don't speak until they speak first. Once they pick, repeat it back so the decision is made.

Capture: chosen (Option 1 / 2 / 3). [Calculated] > "Great. So we're going with {{chosen}}."

> "Okay, from here I'm going to share my screen and finish filling out your paperwork. Go ahead and grab your driver's license for me. While you're doing that, what is the full name of your beneficiary?"

Capture: benFull. [Button] Mark quoted → stage Quoted.

A · Application and policy delivery

Cue: Move quickly to avoid decision remorse. Begin the application. Then set expectations on how and when they get the policy.

Capture: carrier. [Calculated] Agent's writing number for that carrier, or a warning when there is none. [Calculated] The carrier's delivery line from the table below. [Button, primary] Application submitted → stage Application, app date today, policy coverage and premium copied from the chosen option.

Carrier	Say	Note
American Amicable	"Would you like your policy mailed or emailed to you?"	Mail 5–6 days
Americo	"Would you like your policy mailed or emailed to you?"	Mail 5–6 days
Corebridge/AIG	"Would you like your policy mailed or emailed to you?"	Mail 7–9 days
F&G	"You will receive your policy in the mail in 6 to 9 days."	Mark deliver to PI in the special instructions
Foresters	"You'll receive your policy in your email shortly." Or: "Your policy will be delivered in 5 to 7 days."	

Carrier	Say	Note
LGA	"You have the option of downloading the policy now, or you can follow the link they emailed you. It takes you to the policy owner portal, where you register and download your policy."	
Mutual of Omaha	"You'll receive your policy in your email shortly, and a copy will also be mailed to you."	Mail 5–7 days
SBLI	"You'll receive an email with a link to my.sbli.com to register your account and download your policy."	
Transamerica	Fast Doc: "You'll receive your policy shortly by email." Non-Fast Doc: "You'll receive your policy in the mail."	Non-Fast Doc mail 6–9 days
UHL	"You'll receive your policy in the mail."	Mail 5–7 days

L · Lock it down: secure the sale

Cue: If you didn't make the sale, skip to the client survey.

> "One thing I take pride in is making the right recommendations to my clients and making sure you're satisfied with your program. I'd like you to tell me in your own words: what did we just do here today?"

[Calculated] Prompts box: coverage, program, what it's for, beneficiary; also ask how soon the first payment drafts and why we chose this program.

> "What questions do you have for me before I leave?"

> "The program we chose today, do you have peace of mind that this will help your family?"

> "Over the next ____ days or weeks, I'm going to work with the insurance company to get your policy approved. I'll be checking in with you every few days to let you know how things are going. When the policy is approved, we'll review it together. We'll also do an annual policy review with someone from our Member Services department."

> "Also, let's take a minute to save my number in your phone: {{agentPhone}}."

Cue: Having them save it means they recognize your number when you call.

> "Contact me anytime for anything. I'm your agent now. If anyone else calls you about life insurance, feel free to give them my number and have them call me. Our company may send you a few more letters in the mail; you can ignore those now that we have a program in place for you."

L · Referrals

Cue: The 4 Rs after the sale: Rx card, Referral, Reset, Recruit.

> "Before I let you go, I wanted to let you know that billions of dollars in life insurance benefits go unclaimed each year. That happens when beneficiaries don't receive the death benefit after the insured person dies, often because they don't know about the policy or who issued it. So here's what I want for you: 4 or 5 names of people you love and have trusted over the past several years. I'll call them and let them know they're on my file for your policy, and make sure they have my information saved. These are the people who will help make sure your family gets the money. So go ahead with those 4 or 5 people. And please shoot them a message to let them know I'll be contacting them, so I'm not just some random person reaching out."

Capture: referrals.

L · Reset

[Calculated] Debt and retirement from the FIF, when captured.

> "We do a lot more than life insurance. We also have debt elimination plans where you can pay off your debt without spending any more monthly than you are now and build wealth. We can help you build your retirement, or help you protect a portion of your assets from market volatility. If your mortgage and other debts were paid off, would retirement be more comfortable?"

Cue: If they say none and they're fine right now, continue.

> "Do you feel like your debt is preventing you from contributing to your retirement?"

L · Client survey

Cue: If they have assets or are still working, do this whether or not you made the sale.

> "Lastly, before I leave, given some of the information you gave me earlier, I just have a brief client survey to complete with you. Our Client Services department can help clients with several aspects of their overall financial plan, and I want to make sure we aren't missing anything before I leave."

Cue: Work through the Client Survey sheet. Book a follow-up based on the answers.

Capture: surveyNotes; followUp.

Final expense script

Final expense is a one-call close: compliance check → opener → rapport and the why → cost education → fact-finder → health → quote → three-option close → application and bank draft → lock-in and referral. Plan on 20–40 minutes for a full sale. The opener depends on lead age: **Opener A** for fresh digital leads (0–72 hours: call within 5 minutes, then 3–5 attempts on day 1) and **Opener B** for aged leads (1–2 attempts a day, rotating times). The top bar's step switch becomes an A / B switch for final expense leads.

C · Before you dial

[Calculated] Compliance box (green when all clear, red when any check fails):

- Lead's state is one of the agent's licensed states, with the agent's license number for it. If not: "not one of your licensed states. Do not quote or write."

- Client's local time from the state's main time zone, inside or outside 8 a.m.–9 p.m. If outside: "Wait to call."
- Lead age → suggested opener and its dial cadence.

Fields: opener (Opener A · fresh / Opener B · aged, auto-picked); dncChecked (Scrubbed / Not yet) for the National and internal DNC lists.

Rule: Say your name, that you're a licensed agent, and the agency name. Never say or imply this is a government, state, Medicare or Social Security program, and never call it "free."

Rule (Opener B): For aged leads, confirm with the vendor that the original consent covers you and how old it is. Honor any "stop calling me" immediately and log it.

[Dial outcome buttons] No answer · Left voicemail · Sent text · Talked

O · Opener A: fresh digital lead *(Opener A)*

Posture: Speed wins. They just filled out the form, so you're returning their call, not cold calling. Fast, confident, "I'm getting back to you."

> "Hi, is this {{first}}? Hey {{first}}, this is {{agent}}, I'm a licensed insurance agent with {{agency}}. I'm getting back to you on the request you sent in {{when}} about final expense coverage, the plans that take care of burial and funeral costs. You remember filling that out?"

Recording: If you record, say it right after they confirm who they are.

> "Just so you know, this call may be recorded for quality."

Capture: remembers (Remembers / Doesn't remember).

> "No problem at all, it was a short form, probably on {{platform}}. It asked your age and who you'd want to take care of when you pass. You put down {{oneDetail}}. Ring a bell?" *(doesn't remember)*

Cue: Use one real detail from the lead. Don't read their whole record back.

Confirm state and set the agenda

> "Perfect. And you're still in [[v:state]], right? Great. So here's how this works. I'm going to ask you a few questions, see exactly what you qualify for, and show you the prices. Takes about 15 minutes. If it makes sense, great. If not, no hard feelings. Fair enough?"

> "Do you have a pen and paper handy? I'm going to give you some numbers you'll want to write down."

Cue: The pen and paper keeps them engaged and signals this is a real appointment, not a pitch. Wait for them to get it.

O · Opener B: aged lead *(Opener B)*

Posture: They've been called before and expect a pitch. Slow down, sound curious. Your only goal in the first minute is to find out if the need is still open.

> "Hi, is this {{first}}? {{first}}, this is {{agent}}, I'm a licensed agent with {{agency}}. This call may be recorded for quality. I'm following up on a request you put in a while back about burial insurance, and it looks like nobody ever finished helping you with it. Did you ever end up getting something in place?"

Cue: Then stop talking. Let them answer.

Capture: agedBranch ("No, I never did" / "Yes, I got something" / "I don't remember asking").

Branch 1, "No, I never did":

> "Okay, you're not alone. A lot of folks start looking and then life gets busy. What was it that got you looking into it in the first place?"

Capture: why. *Cue: Their answer is your "why." Go to the shared core and skip the first rapport question.*

Branch 2, "Yes, I got something":

> "Good for you, that's the most important thing. Out of curiosity, who did you go with, and do you know if it pays the full amount from day one, or is there a waiting period?"

Capture: existingCarrier; existingPays (Waiting period / GI / not sure, or Day-one and happy).

> "A lot of people get placed in a plan with a two- or three-year wait when their health would qualify them for day-one coverage. Would it be worth five minutes to see if you qualify for better? If not, you keep what you have." *(waiting period / GI / not sure)*

> "Then you're in great shape. Would it be okay if I sent you my number in case anyone in the family ever needs help?" *(day-one and happy; cue: get the referral and end on good terms)*

Rule: Never tell a client to cancel existing coverage. If you write a replacement, complete the state replacement forms and keep the old policy in force until the new one is approved.

Branch 3, "I don't remember asking":

> "That's fair, it may have been a while. It was a short form about burial or final expense coverage, and it had your name and {{cityOrMonth}} on it. Is planning ahead for that something that's still on your mind, or should I take you off my list?"

Cue: If they want off, remove them and log it. No push. [Button] They want off: mark Do not call.

Re-verify before quoting. *Cue: Aged data goes stale. Confirm these before the fact-finder.*

- Current state (must be licensed): [[v:state]]
- Date of birth: [[v:dob]] · age now [[v:age]] (it may have changed since the lead was sold)
- Capture: healthChanged (No change / Health has changed)

W · Rapport and the "why"

Cue: People buy final expense for a person, not a policy. Find out who they're protecting before you ask a single health question.

[Calculated] Rapport cue: "On the form, their favorite hobby is {hobby}. Work it in." (hidden when blank, "none", or the same as their name)

1. "Before I get to the insurance questions, tell me a little about you. Who's in the family?" Capture: family. *(Aged lead who gave their why in the opener: skip this one.)*

2. "If something happened to you tomorrow, who would be the one handling your arrangements?" Capture: handler.
3. "Have you ever had to bury a loved one? How was that paid for? Did they have coverage, or did the family have to come together?" Capture: pastFuneral.
4. "What made you want to look into this now?" Capture: why.

> "So if I'm hearing you right, the main thing is making sure {{beneficiary}} {{benIsnt}} stuck with the bill. Is that right?"

Cue: Mirror it back before moving on.

W · Cost education

> "Do you have an idea what a funeral costs today? The national median for a funeral with a viewing and burial is about $8,300, closer to $10,000 with a burial vault, and that's before the cemetery plot and headstone. A cremation with a viewing runs about $6,300. Do you see yourself being buried or cremated?"

Capture: burialPref (Burial / Cremation / Not sure). *Source: National Funeral Directors Association 2023 medians. Say "about," since local prices vary.*

F · Fact-finder

Ask	Say it like this	Captures and verifies	Why it matters
Full name, DOB	"Let me confirm your full name and date of birth."	[[v:firstName]] [[v:lastName]], [[v:dob]], [[v:age]]; gender	Rate age, application
Height and weight	"About how tall are you, and what do you weigh?"	hwA (placeholder 5'10, 180)	Carrier build charts
Tobacco	"Any tobacco or nicotine in the last 12 months, including vaping?"	tobacco (No / Yes)	Tobacco vs. non-tobacco rates

Ask	Say it like this	Captures and verifies	Why it matters
Beneficiary	"Who would you want this to go to? What's their full name and relationship to you?"	[[v:beneficiary]], [[v:benRel]]; benFull; benDob	Application, and it reinforces the why
Existing coverage	"Any life insurance now, through work or on your own? About how much?"	[[v:hasLife]]; lifeA; lifeAType	Gap amount, replacement check
Income and payday	"Is your income Social Security, pension or work? What day of the month does it hit?"	incomeSource; payday	Set the draft date right after payday
Budget	"If we found the right plan, what monthly amount could you set aside without it taking food off the table?"	budget; shows [[v:amountRequested]] from the form	Anchors the three options

Rule (when coverage is their own policy): Replacing existing coverage requires the state replacement forms and must be in their interest. Tell them not to cancel the old policy until the new one is approved and in force.

H · Health questions

> "Now a few health questions. Just answer as accurately as you can. The insurance company checks prescription and medical records, and being accurate now is what makes sure your family gets paid later."

Verify line: On the form, history of heart attack, stroke or cancer: [[v:heartStrokeCancer]]. [Calculated] Amber box when it says yes: "Ask which one, and when, as you go through the medications."

> "Easiest way to do this: can you grab your medication bottles and read me the names? Don't worry about the doses."

Capture: meds (each medication and what it's for). *Cue: The med list drives underwriting more than anything they tell you. For each medication, ask what it's for.*

[Health grid] Yes / No for each: heart attack, stroke, heart surgery or congestive heart failure · cancer in the last 2–3 years · COPD, emphysema or oxygen use · diabetes with insulin, neuropathy or amputation · kidney failure or dialysis · hospital stay, nursing home or home health care now · Alzheimer's, dementia or memory issues · any terminal diagnosis.

[Calculated] "N of 8 flagged. Check carrier underwriting; use graded or guaranteed issue only if they won't qualify for level." or "Nothing flagged so far. Look for a level, day-one plan."

Rule: Read health questions exactly as written on the carrier application. Never coach answers.

Q · Run the quote

> "Give me about two minutes while I check which companies will approve you at the best price. Stay right there."

Cue: Run it in Insurance Toolkits with state, age, build, tobacco and meds. Pick the carrier with the best rate that gives day-one (level) coverage. Use graded or guaranteed issue only when they won't qualify for level.

[Calculated] Quote sheet (state, age, DOB, gender, height/weight, tobacco, meds, flags, budget, requested) with Copy quote sheet.

Fields: qpHealth (PP / P / R); qpNic (Never / Currently / Recently quit). [Calculated] Quoteplicity box with Open pre-filled quote.

Fields: carrier; planType (Level / Graded / Guaranteed issue); waitYears *(graded or GI)*; amBest; carrierYears. [Calculated] Agent's writing number for that carrier.

P · Presentation and three-option close

Cue: Good news first, then three prices, then ask which one fits. Never ask "do you want it?" Ask "which one?"

> "Okay {{first}}, I've got good news. Based on what you told me, you qualify with {{carrier}}, a company rated {{amBest}} that's been paying claims for over {{years}} years. Your plan is {{planLine}}."

> "Here's how it works. One: your price is locked in and will never go up. Two: your coverage never goes down. Three: it never expires as long as premiums are paid, whether you live to 85 or 105. Four: it pays straight to {{beneficiary}}, usually within a few days of the paperwork, so they can take care of everything without going into their own pocket."

Cue: Confirm each feature against the carrier's product before you say it. Not every plan has every feature.

[Calculated] Anchor box: "Have them write the three numbers down. Top option at or slightly above budget, middle at budget, bottom below." plus their budget and amount requested.

[Option rows] Gold (placeholder 25,000), Silver (15,000), Bronze (10,000): coverage and premium per month each.

> "Get that pen ready. I'm going to give you three options."

> "Option one is our Gold plan: {{feCov1}} in coverage for {{fePrem1}} a month. That covers a full funeral and leaves extra for {{beneficiary}} for bills and the headstone."

> "Option two is Silver: {{feCov2}} for {{fePrem2}} a month. That covers a traditional funeral and burial."

> "Option three is Bronze: {{feCov3}} for {{fePrem3}} a month. That covers a basic service or cremation."

> "Which of those three fits best for you and your family?"

Cue: Then be quiet. Whoever talks first loses. If they pick one, go straight to the application. If they hesitate, use the objection handlers on the lead card.

Capture: chosen (Gold / Silver / Bronze). [Button] Mark quoted.

If the budget is tight:

> "I hear you. Let's not let the price keep you from having something in place. What if we did {{lowerAmt}} for {{lowerPrem}}? Would that work better?"

Capture: lowerAmt; lowerPrem. *Cue: Something in force beats nothing in force. You can increase coverage later.*

A · Application and bank draft

Cue: Move straight into the application in a calm, matter-of-fact tone. Hesitation from you creates hesitation from them.

> "Great choice. Let's get you protected today. I'll fill out the application with you now, and the company will give us a decision, usually today or within a few days."

Checklist: Read every health question exactly as written on the carrier application · Confirm beneficiary full name ({{benFull}}), relationship, and date of birth if the carrier asks · Confirm mailing address and best phone number.

Capture: address, city, zip. Verify line: Best phone: [[v:phone]].

> "Most of my clients like to set the payment for right after their Social Security comes in, so it never gets in the way. You said yours comes on the {{payday}}. Should we set it for the {{draftDay}}?"

Capture: draftDate.

> "The company drafts it straight from your account, same as your other bills. What's the name of your bank? … And can you grab a check or your bank card app? I'll need the routing and account number."

[Calculated] Agent's writing number for the carrier.

Rule: Enter bank details only in the carrier's secure application. CallDesk never has a field for them.

[Button, primary] Application submitted → stage Application.

L · Lock-in and referral

Cue: Do this before you hang up.

> "Congratulations, {{first}}, you've done something most people never get around to. Let me tell you what happens next."

1. "The company may call you for a short phone interview. Answer the same way you did with me."
2. "Your policy will come in the mail in about 2 to 3 weeks. Put it somewhere your family can find it."
3. "You have a free-look period, usually 10 to 30 days depending on your state, to review it."
4. "Please let {{beneficiary}} know you did this and where the policy is. Would you like me to send them my number too?"
5. "Save my number: {{agentPhone}}. If anyone ever calls about changing your coverage, will you call me first before you make any decision?" *Wait for the yes.*

> "One last thing. Who else in your family or church would want the same peace of mind? I'll treat them exactly the way I treated you."

Capture: referrals. *Cue: Log the sale, draft date and follow-up in the lead card before the next dial.*

Objection handling (lead card)

Every objection gets the same three moves: acknowledge it, ask one question to find the real concern, then return to the three options. Two honest attempts, then respect the no and set a follow-up.

They say	What's usually behind it	Say this
"I need to think about it."	Price, trust, or one detail they didn't follow	"That's fair, it's an important decision. Usually when someone says that, it's either the price or something I didn't explain well. Which one is it for you?"

They say	What's usually behind it	Say this
"It's too expensive."	Wrong coverage amount for the budget	"I understand. Let's find a number that works. If you could only do one thing for {{beneficiary}}, what monthly amount would feel comfortable?" Drop to Bronze or lower.
"I need to talk to my kids / spouse."	Wants approval, or using it as an exit	"I respect that. Can I ask, if they said 'go ahead,' would you want to do it? … Then let's get them on the phone now, or set a time tonight when all three of us can talk for ten minutes."
"Just mail me something."	Polite brush-off	"I can, but the prices I showed you are based on your health today, and nothing gets locked in by mail. What specifically would you want to see on paper? I can answer it right now."
"I already have coverage."	May have a waiting period or too little coverage	"Good. Do you know how much it is and whether it pays in full from day one? A lot of people find out their family only gets their premiums back in the first two years." Follow the replacement rules.
"I'm not giving my bank info over the phone."	Fear of scams	"I completely understand, and you should be careful. The payment goes directly to {{carrier}}, not to me, and nothing is drafted until you're approved. You can call {{carrier}} at the number on their website to verify I'm appointed with them. Would that help?"

They say	What's usually behind it	Say this
"I'm on a fixed income."	Real budget limit	"Most of my clients are too, and that's exactly why they do this. They don't want their family coming out of pocket on a fixed income either. Let's find the amount that fits."
"Call me back later."	Bad timing or brush-off	"No problem. Is tonight at {{timeA}} or tomorrow at {{timeB}} better?" Book a specific time. Never leave it open.
"How did you get my number?"	Doesn't remember the request (aged)	"You filled out a request about burial coverage a while back, and it had your name and {{cityOrMonth}} on it. If it's not something you want help with anymore, I'll take you off my list right now."
"Is this a scam?"	Has been burned before	"I'm glad you asked. My name is {{agent}}, and I'm licensed in {{state}}. You can look me up on the {{state}} Department of Insurance website right now. I'll wait." Have ready: {{state}} license {{licNum}} · NPN {{npn}}.

Voicemail and text templates (lead card, with Copy)

Keep voicemails under 20 seconds and say your number twice. Text only leads whose consent covers texting, include an opt-out on the first text, and never send pricing by text. The card shows the set for the lead's opener.

Opener	When	Template
A · fresh	Voicemail	Hi {{first}}, this is {{agent}}, licensed agent with {{agency}}, getting back to you on the final expense request you just sent in. I have your information pulled up. Call me back at {{agentPhone}}. Again, that's {{agentPhone}}. Talk soon.
A · fresh	Text, right after the first missed call	Hi {{first}}, this is {{agent}}, licensed agent with {{agency}}. I just tried calling about the final expense request you sent. Is now a good time, or is later today better? Reply STOP to opt out.
A · fresh	Text, day 1 evening	{{first}}, I have your quote options ready. Takes about 15 minutes. What time works tomorrow?
A · fresh	Text, day 3	Still want to see your options for burial coverage? I can call whenever works for you.
A · fresh	Text, day 7	I'll close out your request for now. If you'd still like to see your prices, just reply YES and I'll call you.
B · aged	Voicemail	Hi {{first}}, {{agent}} with {{agency}}. I'm following up on the burial coverage request you sent in a while back. I just have one quick question for you. Give me a call at {{agentPhone}}. That's {{agentPhone}}.
B · aged	Text, day 1	Hi {{first}}, this is {{agent}} with {{agency}}. A while back you asked about burial insurance. Did you ever get something in place? Reply STOP to opt out.
B · aged	Text, day 3	Just checking back, {{first}}. A lot of folks I talk to got placed in a plan with a 2-year wait when they qualified for day-one coverage. Happy to take a look at yours, no obligation.

Opener	When	Template
B · aged	Text, day 10	Last note from me. If you ever want help with burial coverage for you or your family, I'm at {{agentPhone}}.

CRM

Every lead sits in one stage at a time. Six stages run in order; three "parked" stages sit to the side. Any stage can be set by hand from the stepper on the lead card. Every change is written to the activity log as "Old → New" with a timestamp, and the date each stage was reached is kept.

Stage	Moved here by	Counts toward
New lead	Import or + Lead	—
Contacted	Logging "Talked" on a New lead	—
Appointment set	"Mark appointment set" (mortgage Tie down)	Weekly appointments (goal 20)
Quoted	"Mark quoted" (mortgage close, final expense close)	—
Application	"Application submitted" (both scripts). Also fills app date with today, and policy coverage and premium from the chosen option when empty	Weekly applications; Pipeline "applications pending" premium
Policy in force	By hand from the card or the Pipeline "next stage" button	Pipeline "policies in force" premium
Call back (parked)	By hand	—
Not interested (parked)	By hand	—
Do not call (parked)	By hand, or "They want off: mark Do not call" in Opener B	Must block further dialing and texting

Dial outcomes

Four buttons appear in the script and on the card: **No answer**, **Left voicemail**, **Sent text** and **Talked**.

- Each one adds an activity entry and sets the last-dial time.
- Every outcome except Sent text adds one dial to the lead and to the weekly count (goal 500).
- Talked on a New lead moves it to Contacted.

Activity log and notes

- **Entry:** time, kind (No answer, Voicemail, Text, Talked, Note, Call, Stage) and text. Shown newest first, the latest 40 on the card.
- **Add a note:** a text box with a kind picker (Note, Call, Voicemail, Text) and an Add to activity button.
- **Import:** writes the first entry.

Follow-ups and appointments

- **Next follow-up:** a date-time and a "what for" line on every lead.
- **Appointment:** mortgage leads also carry a date and time, filled from the Step 1 funnel.
- **Due today:** the Pipeline lists follow-ups due by the end of today, sorted by time and marked overdue when the date has passed. In force, Not interested and Do not call leads are left out. The board card shows the follow-up time in amber.

Weekly goals

- The top bar shows dials out of 500, appointments out of 20, and applications this week.
- Counts reset every Monday.
- Step 1 also shows dials and appointments as progress bars, plus the dials to this lead.

Pipeline totals

- Leads in the desk.
- Appointments set.
- Applications pending, with the sum of monthly premium.
- Policies in force, with the sum of monthly premium.

Premium comes from the Policy premium field, else the chosen option's premium.

Lists and filters

- Search across name, phone, city, street address, spouse name and email.
- Filter by stage and by type (Mortgage / Final expense).
- Remove all sample leads in one tap.
- Export every lead as CSV: lead fields, stage, dials, follow-up, the main captured answers, policy fields, verified fields, corrections ("field: what the lead had") and the activity log on one line.

Agent profile

Each agent has one profile. It drives the scripts (name, agency, callback number), the licensed-state check, carrier suggestions and writing numbers on applications. In the multi-agent app, each login owns its own profile; a new agent starts blank.

Card	Fields	Notes
Profile	Photo, display name, role (Agent, Agency owner, Manager, Recruiter, Trainee), phone ("Licensing support only, never public"), email, booking/calendar link, IMO/agency	Photo upload resized to 480 px max. "Adjust position" gives left–right and up–down sliders for where the face sits in the circle. Initials show when there's no photo
On your calls	Agency name said on calls; callback number given to clients	Feed {{agency}} and {{agentPhone}}
Quoting	Mortgage protection quote link; final expense quote link; send lead name, email and phone (off by default)	See Integrations
Licensing	NPN (with Copy); one row per state: state, license number (Copy), expiration date, resident toggle	The resident state shows as "Resident"; only one at a time. Summary chips: NPN, licensed states, resident state, carriers appointed, E&O through date

Card	Fields	Notes
Carrier writing numbers	One row per carrier: carrier (with suggestions), writing number (Copy), status (Appointed, Pending, Inactive)	The same carrier can appear twice (two SBLI numbers). Remove asks for a second tap
Additional info	DOB, driver's license number (hidden with Show/Hide), driver's license state, AML provider, AML course completed date, E&O carrier, E&O policy number, E&O certificate number, E&O expiration date	Sensitive. See Security

How the profile feeds the rest of the app

- **Licensed states:** drive the final expense compliance check and the "licensed / NOT licensed" line on the lead snapshot. With no states saved, the check says to add them.
- **{{licNum}}:** the license number for the lead's state, shown in the compliance box and the "Is this a scam?" handler, along with the NPN.
- **Carrier suggestions:** appointed and pending carriers (names without the parenthetical) come first, then a standard list: American Amicable, Americo, Corebridge/AIG, F&G, Foresters, LGA, Mutual of Omaha, SBLI, Transamerica, UHL, Aetna/CVS, Royal Neighbors, Gerber, Liberty Bankers, Prosperity.
- **Writing number lookup:** when a carrier is chosen on an application, the app finds the agent's writing numbers for it and shows them with the NPN. With none on file, it warns: "No writing number for X in your Profile. Make sure you're appointed before you write it."
- **Carrier aliases:** Corebridge/AIG and AIG = American General; F&G = Fidelity and Guaranty; UHL = United Home Life; LGA = Legal & General America; Banner = Banner Life. A name also matches when one is the start of the other.
- **Alerts:** an E&O policy or state license expiring within 60 days gets an amber alert, and one already expired gets a red alert. No licensed states at all is an amber alert. Any alert puts a dot on the Profile tab.

Starting data for Andrew's account

Load it at setup from his licensing portal: NPN, license numbers for MI, OH, SC, TX (resident) and VA, and these writing numbers:

- American General
- Americo
- Banner Life (BeyondTerm)
- Fidelity and Guaranty
- Legal & General America (inactive)
- Liberty Bankers
- Mutual of Omaha
- Occidental
- SBLI (two numbers)
- Transamerica
- United Home Life

He also has the AML course with SuranceBay and E&O through Next Insurance. Andrew enters his DOB and driver's license number himself after login; they are never seeded or put in code.

Open question: the scripts currently give clients (361) 761-0910 as the callback number. Andrew's newer business line is (281) 635-4471. He should confirm which one goes in "Callback number you give clients."

Integrations to build

The prototype can't reach outside services, so these are the main reasons to move to Lovable. Build them on Lovable's Supabase backend. Keep every API key and webhook secret in Supabase secrets, called only from Edge Functions, never in the browser.

Backend and auth (Supabase)

- **Auth:** email login. Roles: agent (own leads only), manager (their team's leads, read-only scripts), owner (everything, edits scripts and carriers).
- **Tables:**
  - `profiles`, `licenses` (agent, state, number, expires, resident) and `writing_numbers` (agent, carrier, number, status)

  - `leads`: vendor fields as columns, call answers as a JSON column, `verified` and `original_values` as JSON
  - `activities` (lead, time, kind, text, source = manual / callhippo / import) and `stage_events` (lead, from, to, time)
  - `scripts` (type, version, sections JSON), `imports` (file name, column map, counts) and `call_logs` (raw CallHippo payloads)
- **Row-level security** on every table by agent, with manager and owner overrides.
- **Storage:** profile photos and the EST8 logo. Lead files are not stored after import.
- **Realtime:** the lead card updates when a CallHippo webhook writes a new call while it's open.

Quoteplicity (pre-filled quote link)

The quote step builds a link to the agent's Quoteplicity engine and opens it in a new tab with the lead's details filled in. Base links come from Profile → Quoting (Link Builder → pick the engine → copy Link). Andrew's account has three live engines: Final Expense, No Medical Exam Life, and Standard Term Life. His No Medical Exam link is `https://20009a4c1a8eb5e9.quoteplicity.com/quote/no-exam`. His Final Expense and Term links still need copying from Link Builder.

Parameter	Values	Filled from
state	2-letter code	Lead state
dob	YYYY-MM-DD	Lead DOB
gender	Male / Female	Lead gender
height_ft, height_in, weight	numbers	Parsed from height/weight
nicotine	never / currently / recently	qpNic, defaulted from tobacco
health	PP / P / R	qpHealth, picked by the agent
coverage_amount	number	Chosen option, else Silver or amount requested (FE); loan, half loan, or months × payment (MP)
duration	10 / 20 / 30	qpTerm, mortgage only

Parameter	Values	Filled from
results_modal_override	hide	Always (skip the name, email, phone screen)
skip_confirmation	1	Always
first_name, last_name, name, email, phone	text	Only when the profile switch is on, because it can create a lead in Quoteplicity's CRM and set off its automations
nicotine_last_use, phone_preverified, r	—	Not sent

- **Building the link:** any of these parameters already in the saved base link is replaced, other parameters are kept, and a parameter with no value is left out. The box above the button lists what will be sent and what's missing.
- **Fallback:** final expense uses the mortgage link when no final expense link is saved, with a note saying so.
- **Later:** Quoteplicity offers an AI-agent connection with a quote_run tool and lead lookup. If they offer a REST API, an Edge Function could pull indicative rates into the desk. Health answers still happen in their quoter.

CallHippo (dialer)

Andrew is choosing CallHippo, about $30 per user for Professional (unlimited US calling) plus about $35 for the Parallel Dialer add-on. CallHippo confirms the prices. Build a two-way sync:

1. **Caller ID by state.** Add a Profile card that maps each licensed state to one of the agent's CallHippo numbers. Each lead shows "Call from your Michigan number (231) …".
2. **Lists out.** An "Export to CallHippo" button builds a contact list from the current filter (stage, type, state), skips Do not call and unlicensed states, and splits by state so each campaign dials from that state's number. Phase 1 is a CSV in CallHippo's import format; Andrew will send their sample import file to match the headers. Phase 2 pushes contacts through CallHippo's API or Make's "Create a Contact" action.

3. **Calls in.** A Supabase Edge Function at `/callhippo-webhook` takes CallHippo's custom webhook, a POST with JSON after every call. Fields used: callSid, from/fromNumber, to/toNumber, callType, status, reason, duration, durationSeconds, startTime, endTime, recordingUrl, note, tags, dispositions, and extraParams (campaignId, agentId, crmUniqueId).
    - **Matching:** by phone digits (the lead is `to` for outgoing calls and `from` for incoming), or by crmUniqueId when CallDesk's lead id is passed in the contact.
    - **Logging:** an activity entry with the outcome, duration, disposition, note and recording link; the dial count goes up.
    - **Stage:** an answered call moves a New lead to Contacted.
    - **Duplicates:** ignored by callSid.
    - **Security:** a secret token in the URL is required.
4. **Fallback.** Paste or drop a CallHippo call-log CSV export and get the same matching.

Lead vendors

- **Now:** CSV / Excel import with column matching (see Lead data model). The GOAT Leads final expense file maps with no changes.
- **Next:** a `/lead-intake` Edge Function so vendors or Andrew's own Meta and website forms can post leads in real time. Each lead lands as New, with "Imported from …" in the activity, and the TrustedForm certificate kept.
- **Fresh-lead alert:** a lead under 5 minutes old should alert the agent, since Opener A's rule is to call within 5 minutes.

Not needed

No bank or card data ever enters CallDesk. Bank drafts are entered only in the carrier's application.

Security, compliance and data rules

CallDesk holds health answers, medications, dates of birth and contact details for consumers, plus the agent's own license and ID details. Treat all of it as sensitive. These rules are requirements, not suggestions.

Data rules

- **Never stored:** bank routing or account numbers, card numbers, SSNs. The draft step tells the agent to enter bank details only in the carrier's application, and the app has no fields for them.
- **Agent's DOB and driver's license number:** masked by default, visible only to that agent, and never sent to any integration.
- **Lead health answers and medications:** visible to the owning agent and their manager only. They are never included in the Quoteplicity link, which carries rating inputs only.
- **Secrets:** all API keys and webhook tokens live in Supabase secrets and are used only inside Edge Functions.
- **Recordings:** CallHippo recording links are stored as links, not copied files.
- **Deleting:** removing a lead or a list row asks for a second tap. Deleting a lead also deletes its activity and call logs.
- **Export:** CSV export is limited to the agent's own leads, or a manager's team.
- **Audit:** stage changes, verification fixes (keeping the original value) and imports are logged with who and when.

Calling compliance built into the flow

- **Licensed states:** quote and write only in states where the agent is licensed, checked from Profile. Unlicensed leads are flagged red and left out of CallHippo exports.
- **Calling hours:** 8 a.m. to 9 p.m. in the client's local time, from the state's main time zone. Outside it the app shows red, and exports skip the lead until the window opens. States with more than one time zone use the main one, so the agent should confirm.
- **DNC:** scrub against the National DNC Registry and the internal list before dialing (the Scrubbed / Not yet toggle). Do not call blocks dialing, texting and export. Any "stop calling me" is honored immediately and logged.
- **Consent:** keep the TrustedForm certificate URL on every vendor lead. For aged leads, confirm the vendor's consent covers the agent and how old it is. Auto-dialing cell phones generally needs prior express written consent, so Andrew should confirm with his upline and CallHippo before turning on parallel or auto dialing.
- **Texting:** only leads whose consent covers texting. The first text carries "Reply STOP to opt out," and pricing is never sent by text.
- **Disclosures:** every opener says the agent's name, that they're licensed, and the agency. Say "This call may be recorded for quality" when recording. Never imply a government, state, Medicare or Social Security program, and never call coverage free.

- **Underwriting honesty:** health questions are read exactly as written on the carrier application, and answers are never coached.
- **Replacements:** the app warns when existing personal coverage is reported. State replacement forms are required, and the old policy stays in force until the new one is approved.

Disclaimer

This section restates the practices in Andrew's scripts. It isn't legal advice; carrier, upline and state rules govern.

Build phases and acceptance checklist

Build in five phases, giving Lovable one phase per prompt with the sections named. Each phase ends usable on its own.

1. **Foundation.** Supabase auth, roles, the tables in Integrations, row-level security, the Brand section's look in light and dark, the top bar, and the three views as empty shells. Sections: Brand, Screens, Security.
2. **Leads and CRM.** The lead model, import with column matching (test with the GOAT file), lead queue with search and filters, lead card, stages, dial outcomes, activity and notes, follow-ups, Pipeline board, weekly goals, CSV export. Sections: Lead data model, CRM.
3. **Script engine and scripts.** Scripts stored as JSON, every block type, tokens, verify chips, show-when rules and calculations, then load the mortgage Step 1, Step 2 and final expense scripts exactly as written here. Sections: Dynamic scripting engine, the three script sections.
4. **Profile and compliance.** Profile cards, licenses, writing numbers, photo, alerts, the compliance box, carrier lookup on applications, and the Quoteplicity pre-filled link. Sections: Agent profile, Integrations → Quoteplicity.
5. **Dialer and live intake.** CallHippo caller ID by state, list export, the call webhook and CSV fallback, the lead intake webhook and the fresh-lead alert. Sections: Integrations → CallHippo, Lead vendors.

Acceptance checklist

- [ ] Importing the GOAT final expense CSV adds all 30 rows as final expense leads with every column matched and no manual changes

- [ ] A lead from Michigan shows "licensed here" with the MI license number; a lead from a state not in Profile shows red and is left out of exports
- [ ] At 9:30 p.m. in the client's time zone the compliance box shows "Wait to call"
- [ ] A final expense lead 2 hours old opens on Opener A; one 12 days old opens on Opener B
- [ ] Every {{token}} fills live as fields are typed, and a missing value shows as an amber [placeholder] in the sentence
- [ ] Fixing a verify chip keeps the original and shows "Lead had: …" on the card
- [ ] Married vs single, stayNow, aged branches and program all show and hide the right lines
- [ ] Equity, budget total, cash flow survivors, 10% anchor and critical period months × payment match a hand calculation
- [ ] Partial payoff with a $286,000 loan and a 30-year term builds a Quoteplicity link with coverage_amount=143000 and duration=30
- [ ] Picking Mutual of Omaha shows the agent's writing number and NPN; picking a carrier with no number shows the warning
- [ ] "Mark appointment set", "Mark quoted" and "Application submitted" move the stage, write activity and update the weekly counts
- [ ] A CallHippo webhook for an answered call to a New lead logs the call with its recording link and moves the lead to Contacted; sending the same callSid twice logs it once
- [ ] An E&O expiration 40 days out shows an amber alert and a dot on the Profile tab
- [ ] No screen, export or integration ever shows or sends bank details, and the agent's DOB and license number stay masked until Show
- [ ] Everything works at 390 px wide and in dark mode

Open questions for Andrew

- Final Expense and Term engine links from Quoteplicity Link Builder.
- CallHippo's sample contact import file and a call-log export, to match their formats exactly.
- Which CallHippo number goes with each state.
- Callback number for clients: (361) 761-0910 or (281) 635-4471.
- The EST8 logo file, and whether the gold from the EST8 website should join navy and orange as an accent.
